OWNER'S MANUAL 2011

250 SX-F EU 250 SX-F MUSQUIN REPLICA EU

250 SX-F USA

250 XC-F USA

Art. no. 3211623en

Congratulations on your decision to purchase a KTM motorcycle. You are now the owner of a state-of-the-art sports motorcycle that will give you enormous pleasure if you service and maintain it accordingly.

We wish you a lot of enjoyment in riding this vehicle!

Enter the serial numbers of your vehicle below.

Chassis number (p. 9)	Dealer's stamp
Engine number (p. 9)	

The owner's manual corresponded to the latest state of this series at the time of printing. Slight deviations resulting from continuing development and design of our motorcycles cannot, however, be completely excluded.

All specifications are non-binding. KTM Sportmotorcycle AG specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from illustrations and descriptions, as well as misprints and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of delivery.

Symbols used

The symbols used are explained in the following.

Identifies an expected reaction (e.g. to a work step or a function).

Identifies an unexpected reaction (e.g. to a work step or a function).

All work marked with this symbol requires specialist knowledge and technical understanding. In the interest of your own safety, have these jobs done in an authorized KTM workshop! There, your motorcycle will be serviced optimally by specially trained experts using the specialist tools required.

Identifies a page reference (more information is provided on the specified page).

Formats used

The typographical and other formats used are explained below.

Specific name Indicates a proprietary name.

Name® Identifies a protected name.

Brand™ Identifies a brand available on the open market.

Use definition

KTM sport motorcycles are designed and built to withstand the normal stresses and strains of competitive use. The motorcycles comply with currently valid regulations and categories of the top international motorsport organizations.

Info

The motorcycle may only be used in closed off areas remote from public road traffic.

Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care and tuning work on the engine and chassis is properly carried out as described in the owner's manual. Poor adjustment and tuning of the engine and chassis can lead to damage and breakage of components.

Using the vehicle in difficult conditions such as on sand or very muddy or wet terrain can lead to above-average wear of components such as the drive train or the brakes. For this reason, it may be necessary to service or replace worn parts before the limit specified in the service schedule is reached.

Pay careful attention to the prescribed running-in period and service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle.

Warranty

The work prescribed in the service schedule must be carried out by an authorized KTM workshop only and confirmed in the customer's service record and in the **KTM dealer.net**; otherwise, all warranty claims will be void. No warranty claims can be considered for damage resulting from manipulations and/or alterations to the vehicle.

Fuel, oils, etc.

You should use the fuels, oils and greases according to specifications as listed in the owner's manual.

Spare parts, accessories

For your own safety, only use spare parts and accessory products that are approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss. Certain spare parts and accessory products are specified in parentheses in the descriptions. Your KTM dealer will be glad to advise you.

The current KTM PowerParts for your vehicle can be found on the KTM website.

International KTM Website: http://www.ktm.com

Work rules

Special tools are required for some work. These are not part of the vehicle standard equipment, but they can be ordered with the item number stated in parentheses. Ex.: bearing puller (15112017000)

When the vehicle is assembled, non-reusable parts (e.g., self-locking screws and nuts, gaskets, seal rings, O-rings, splints, lock washers) must be replaced with new parts.

Where thread lockers are used on screw connections (e.g., Loctite®), follow the instructions for use from the manufacturer.

After disassembly, clean the parts that are to be reused and check them for damage and wear. Replace damaged or worn parts. After you complete the repair or maintenance work, check the roadworthiness of the vehicle.

Transport

Note

Danger of damage The parked vehicle may roll away or fall over.

- Always place the vehicle on a firm and even surface.

Note

Fire hazard Some vehicle components become very hot when the vehicle is operated.

- Do not park the vehicle near flammable or explosive substances. Do not place objects on the vehicle while it is still warm from being run. Always let the vehicle cool first.
- Switch off the engine.
- Use straps or other suitable devices to secure the motorcycle against accidents or falling over.

Environment

Motorcycling is a wonderful sport and we naturally hope that you can enjoy it to the full. However, it is a potential problem for the environment and can lead to conflicts with other persons. But if you use your motorcycle responsibly, you can ensure that such problems and conflicts do not have to occur. To protect the future of motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others.

Notes/warnings

Pay close attention to the notes/warnings.

Info

Various information and warning labels are affixed to the vehicle. Do not remove information/warning labels. If they are missing, you or others may not recognize potential hazards and may therefore be injured.

Grades of risks

Danger

Identifies a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

Warning

Identifies a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

Caution

Identifies a danger that may lead to minor injuries if the appropriate measures are not taken.

Note

Identifies a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

Warning

Identifies a danger that will lead to environmental damage if the appropriate measures are not taken.

Owner's manual

- It is important that you read this owner's manual carefully and completely before making your first trip. It contains useful information and many tips on how to operate and handle your motorcycle. Only then will you learn how to best customize the motorcycle for your own use and to protect yourself from injury. The owner's manual also contains important information on servicing the motorcycle.
- The owner's manual is an important component of the motorcycle and should be handed over to the new owner if the vehicle is sold.

VIEW OF VEHICLE

View of vehicle, front left (example)

1	Hand brake lever (♥ p. 10)

2	Throttle grip (* p. 10)
3	Fork compression adjustment
4	Level viewer for brake fluid, rear
5	Shock absorber rebound adjustment
6	Level viewer, engine oil
7	Foot brake lever (♥ p. 13)
8	Kick starter (♥ p. 13)

Chassis number

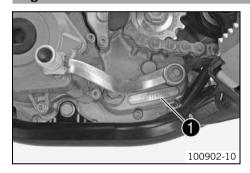

The chassis number **1** is stamped on the right side of the steering head.

Type label

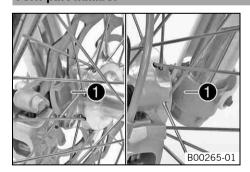

The type label • is fixed to the front of the steering head.

Engine number

The engine number $oldsymbol{0}$ is stamped on the left side of the engine under the engine sprocket.

Fork part number

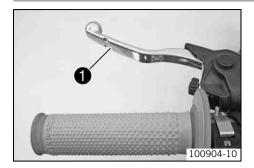

The fork part number • is stamped on the inner side of the axle clamp.

Shock absorber part number

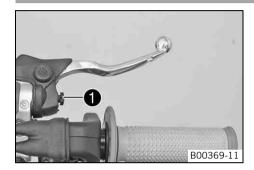

The shock absorber part number lacktriangle is stamped on the top of the shock absorber above the adjusting ring on the engine side.

Clutch lever

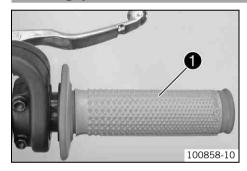

The clutch lever **①** is fitted on the left side of the handlebar. The clutch is hydraulically operated and self-adjusting.

Hand brake lever

Hand brake lever **1** is located on the right side of the handlebar. The hand brake lever is used to activate the front brake.

Throttle grip

The throttle grip **1** is fitted on the right side of the handlebar.

Kill switch

Kill switch **1** is fitted on the left side of the handlebar.

Possible states

- \bullet Kill switch \boxtimes in basic position In this position, the ignition circuit is closed and the engine can be started.
- Kill switch ⋈ pressed In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

Electric starter button (XC-F)

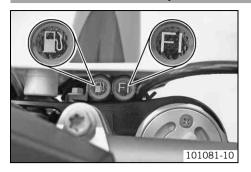

The electric starter button **①** is fitted on the right side of the handlebar.

Possible states

- Electric starter button (3) in basic position
- Electric starter button ③ pressed In this position, the electric starter is actuated.

Overview of indicator lamps

Possible states

FI warning lamp (**MIL**) lights up/flashes orange – The OBD (onboard diagnosis) has identified an emissions- or safety-critical fault.

(XC-F)

Fuel level warning lamp lights up orange – Fuel level has reached the reserve mark.

Opening the filler cap

Danger

Fire hazard Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no
 fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

Narning

Danger of poisoning Fuel is poisonous and a health hazard.

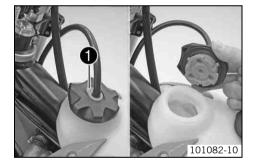

Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.

Warning

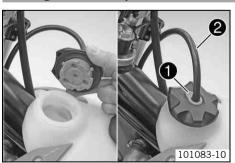

Environmental hazard Improper handling of fuel is a danger to the environment.

- Do not allow fuel to get into the ground water, the ground, or the sewage system.

Press release button 1, turn the filler cap counterclockwise and lift it free.

Closing the filler cap

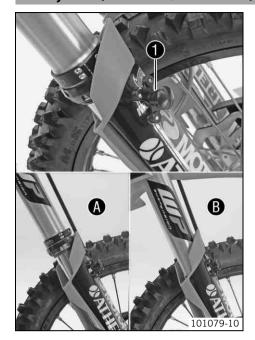

Replace the filler cap and turn clockwise until the release button • locks in place.

Info

Run the fuel tank breather hose 2 without kinks.

Factory Start (SX-F MUSQUIN REPLICA)

The Factory Start **1** is mounted on the right fork protector.

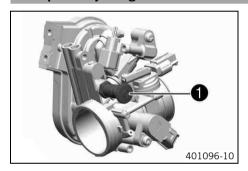

Possible states

- • Factory Start is deactivated The fork is in the normal operating mode.
- § Factory Start is activated The fork is compressed and the front of the motorcycle is lowered.

By activating the Factory Start, the front of the motorcycle is lowered; this causes the front wheel to rise up off the ground later during acceleration.

When the fork compresses for the first time, the Factory Start lock button is released automatically. From this point on, the fork operates as if the Factory Start were deactivated or not installed.

Idle speed adjusting screw

Idle speed adjusting screw • is located on the throttle valve body at the top left. The idle speed adjusting screw has two functions.

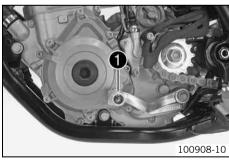

Turning it controls the idle speed.

Pulling it out all the way raises the idle speed during a cold start.

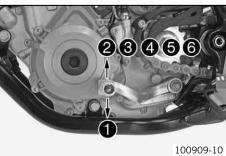

Possible states

- RPM increase activated Idle speed adjusting screw is pulled out all the way.
- RPM increase deactivated Idle speed adjusting screw is pushed in all the way.

Shift lever

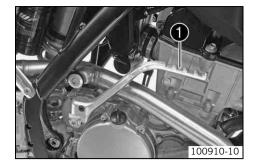

Shift lever **1** is mounted on the left side of the engine.

The gear positions can be seen in the photograph. The neutral or idle position is between the first and second gears.

Kick starter

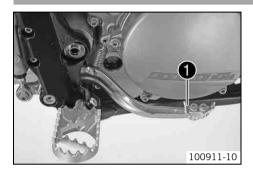

The kick starter **1** is fitted on the right side of the engine. The upper part of the kick starter can be folded in.

Info

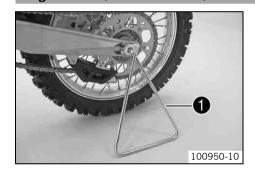

Before riding, fold the upper part of the kick starter toward the engine.

Foot brake lever

Foot brake lever **1** is located in front of the right footrest. The foot brake lever is used to activate the rear brake.

Plug-in stand (All SX-F models)

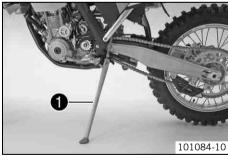

The holder for the plug-in stand **1** is the left side of the wheel spindle. The plug-in stand is used to park the motorcycle.

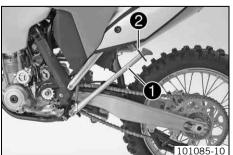

Info

Remove the plug-in stand before starting on a trip.

Side stand (XC-F)

The side stand **1** is on the left side of the vehicle.

The side stand is used to park the motorcycle.

Info

When you are riding, side stand \bullet must be folded up and secured with rubber band \bullet .

Advice on first use

Danger

Danger of accidents Danger arising from the rider's judgement being impaired.

 Do not operate the vehicle while under the influence of alcohol, drugs and certain medications or physically or mentally impaired.

Warning

Risk of injury Missing or poor protective clothing present an increased safety risk.

Wear protective clothing (helmet, boots, gloves, pants and jacket with protectors) every time you ride the vehicle. Always
wear protective clothing, which must be undamaged and meet legal requirements.

Warning

Danger of crashing Poor vehicle handling due to different tire tread patterns on front and rear wheels.

- The front and rear wheels must be fitted with tires with similar tread patterns to prevent loss of control over the vehicle.

Warning

Danger of accidents Critical riding behavior due to inappropriate riding.

Adapt your riding speed to the road conditions and your riding ability.

Warning

Danger of accidents Accident risk caused by presence of a passenger.

Your vehicle is not designed to carry passengers. Do not ride with a passenger.

Warning

Danger of accidents Unstable riding behavior.

Do not exceed the maximum permissible weight and axle loads.

Warning

Risk of misappropriation Usage by unauthorized persons.

Never leave the vehicle while the engine is running. Secure the vehicle against use by unauthorized persons.

Info

When using your motorcycle, remember that others may feel disturbed by excessive noise.

- Make sure that the pre-delivery inspection work has been carried out by an authorized KTM workshop.
 - ✓ You receive a delivery certificate and the service record at vehicle handover.
- Before your first trip, read the entire operating instructions carefully.
- Get to know the controls.
- Adjust the basic position of the clutch lever. (* p. 50)
- Adjust the basic position of the hand brake lever. (** p. 52)
- Adjust the basic position of the foot brake lever. ⁴ (▼ p. 56)
- Get used to handling the motorcycle on a suitable piece of land before making a longer trip.

Info

Your motorcycle is not authorized for riding on public roads.

Offroad, you should be accompanied by another person on another machine so that you can help each other.

- Try also to ride as slowly as possible and in a standing position to get a better feeling for the vehicle.
- Do not make any offroad trips that over-stress your ability and experience.
- Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.

(All SX-F models)

Do not transport luggage.

(XC-F)

 If you carry any baggage, make sure it is fixed firmly as close as possible to the center of the vehicle and ensure even weight distribution between the front and rear wheels.

Info

Motorcycles react sensitively to any changes of weight distribution.

Do not exceed the overall maximum permitted weight and the axle loads.

G	ιιiα	dρ	Нi	n	6
_			٠.	٠.	_

Maximum permissible overall weight	335 kg (739 lb.)
Maximum permissible front axle load	145 kg (320 lb.)
Maximum permissible rear axle load	190 kg (419 lb.)

Run in the engine. (* p. 15)

Running in the engine

During the running-in phase, do not exceed the specified engine speed and engine performance.

Maximum engine speed			
During the first operating hour	7,000 rpm		
Maximum engine performance			
During the first 3 service hours	≤ 75 %		

- Avoid fully opening the throttle!

Preparing the vehicle for difficult riding conditions

- Using a motorcycle in difficult conditions can lead to excessive wear of components such as the power train or brakes. For this
 reason, it may be necessary to service or replace worn parts before the limit specified in the service schedule is reached.
- KTM recommends that you use the specified engine oil for difficult riding conditions and to increase performance.

Engine oil (SAE 10W/60) (00062010035) (* p. 93)

Difficult riding conditions are:

- Rides on dry sand. (♥ p. 15)
- Rides on wet sand. (♥ p. 16)
- Rides on wet and muddy surfaces. (* p. 16)
- Rides at high temperatures and low speeds. (* p. 17)
- Rides at low temperatures or in snow. (* p. 17)

Preparing for rides on dry sand

Seal the air filter box.

Tip

Seal the air filter box at the edges against dirt.

- Clean the air filter and air filter box. 🔌 (🕶 p. 42)

Info

Check the air filter approx. every 30 minutes.

Dust protection device for air filter (77206920000)

Info

See the KTM PowerParts fitting instructions.

Fit a sand protection device on the air filter.

Sand protection device for air filter (77206922000)

Info

See the KTM PowerParts fitting instructions.

- Clean the chain.

Chain cleaner (* p. 95)

Fit the steel sprocket.

Tip

Do not grease the chain.

- Clean the radiator fins.
- Straighten bent radiator fins carefully.
- If used in sand regularly, replace the piston every 20 operating hours.

Preparing for rides on wet sand

Seal the air filter box.

Tip

Seal the air filter box at the edges against dirt.

Info

Check the air filter approx. every 30 minutes.

- Fit a waterproofing device on the air filter.

Waterproofing device for air filter (77206921000)

Info

See the KTM PowerParts fitting instructions.

- Clean the chain.

Chain cleaner (* p. 95)

- Fit the steel sprocket.

Tip

Do not grease the chain.

- Clean the radiator fins.
- Straighten bent radiator fins carefully.
- If used in sand regularly, replace the piston every 20 operating hours.

Preparing for rides on wet and muddy surfaces

Seal the air filter box.

Tip

Seal the air filter box at the edges against dirt.

– Clean the air filter and air filter box. 🔌 (🕶 p. 42)

Info

Check the air filter approx. every 30 minutes.

Fit a waterproofing device on the air filter.

Waterproofing device for air filter (77206921000)

See the KTM PowerParts fitting instructions.

- Fit the steel sprocket.
- Clean the motorcycle. (* p. 77)
- Straighten bent radiator fins carefully.

Preparing for rides at high temperatures and low speeds

Seal the air filter box.

Tip

Seal the air filter box at the edges against dirt.

Clean the air filter and air filter box. 4 (* p. 42)

Info

Check the air filter approx. every 30 minutes.

Adjust the secondary drive to the road conditions.

Info

The engine oil quickly gets hot if the clutch has to be operated very often due to an excessively high secondary drive.

Clean the chain.

Chain cleaner (* p. 95)

- Clean the radiator fins.
- Straighten bent radiator fins carefully.
- Check the coolant level. (* p. 68)

Preparing for rides at low temperatures or in snow

Seal the air filter box.

Seal the air filter box at the edges against dirt.

Clean the air filter and air filter box. 4 (* p. 42)

Check the air filter approx. every 30 minutes.

- Fit a waterproofing device on the air filter.

Waterproofing device for air filter (77206921000)

Info

See the **KTM PowerParts** fitting instructions.

Checks and maintenance before putting into operation

Info

Before every trip, check the condition of the vehicle and ensure that it is safe to operate. The vehicle must be in perfect technical condition when used.

- Check the engine oil level. (* p. 73)
- Check the front brake fluid level. (* p. 53)
- Check the rear brake fluid level. (* p. 57)
- Check the front brake linings. (* p. 54)
- Check the rear brake linings. (* p. 58)
- Check that the brake system is functioning properly.
- Check the coolant level. (* p. 68)
- Check for chain dirt accumulation. (* p. 46)
- Check the chain, rear sprocket, engine sprocket and chain guide. (* p. 47)
- Check the chain tension. (* p. 46)
- Check the tire condition. (♥ p. 62)
- Check the tire air pressure. (* p. 63)
- Clean the dust boots of the fork legs. (* p. 33)
- Bleed the fork legs. (♥ p. 32)
- Check the air filter.
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check all screws, nuts and hose clamps regularly for tightness.
- Check the fuel reserves.

Starting

Danger

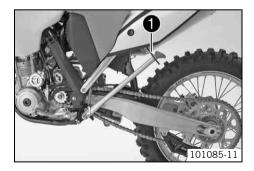

Danger of poisoning Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

 When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.

Note

Engine failure High engine speeds in cold engines have a negative effect on the service life of the engine.

- Always warm up the engine at low engine speeds.

(All SX-F models)

Remove the plug-in stand.

(XC-F)

- Raise the motorcycle off of the stand and secure the stand with rubber band **1**.
- Shift gear to neutral.

Condition

Ambient temperature: < 20 °C (< 68 °F)

- Pull the idle speed adjusting screw all the way out.
- Press the electric starter button or press the kick starter robustly through its full range.

Info

Do not open the throttle to start.

Press the electric starter button for at most 5 seconds. Wait for a least 5 seconds before trying again.

Warning lamp **FI** lights up briefly as a functional control when starting.

Starting off

- Pull the clutch lever, engage 1st gear, release the clutch lever slowly and simultaneously open the throttle carefully.

Shifting, riding

Warning

Danger of accidents
If you change down at high engine speed, the rear wheel can lock up.

- Do not change into a low gear at high engine speed. The engine races and the rear wheel can lock up.

Info

If you hear unusual noises while riding, stop immediately, switch off the engine and contact an authorized KTM workshop. First gear is used for starting off or for steep inclines.

- When conditions allow (incline, road situation, etc.), you can shift into a higher gear. To do so, release the throttle while simultaneously pulling the clutch lever, shift into the next gear, release the clutch and open the throttle.
- If you raised the idle speed to start the vehicle, push the idle speed adjusting screw in all the way after the engine warms up.
- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is ¾ open. This will barely reduce the speed but fuel consumption will be considerably lower.
- Always open the throttle only as much as the engine can handle abrupt throttle opening increases fuel consumption.
- To shift down, brake and close the throttle at the same time.
- Pull the clutch lever and shift into a lower gear, release the clutch lever slowly and open the throttle or shift again.
- Switch off the engine if you expect to be standing for a long time.

Guideline

≥ 1 min

- Avoid frequent and longer slipping of the clutch. This heats the engine oil, the engine and the cooling system.
- Ride with a lower engine speed instead of with a high engine speed and a slipping clutch.

Applying the brakes

Warning

Danger of accidents If you brake too hard, the wheels can lock.

Adapt your braking to the traffic situation and the road conditions.

Warning

Danger of accidents Reduced braking efficiency caused by spongy pressure point of front or rear brake.

- Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

Warning

Danger of accidents Reduced braking efficiency due to wet or dirty brakes.

- Clean or dry dirty or wet brakes by riding and braking gently.
- On sandy, wet or slippery surfaces, use the rear brake.
- Braking should always be completed before you go into a bend. Change down to a lower gear appropriate to your road speed.
- On long downhill stretches, use the braking effect of the engine. Change down one or two gears, but do not overstress the engine.
 In this way, you have to brake far less and the brakes do not overheat.

Stopping, parking

Warning

Risk of misappropriation Usage by unauthorized persons.

Never leave the vehicle while the engine is running. Secure the vehicle against use by unauthorized persons.

Warning

Danger of burns Some vehicle components become very hot when the vehicle is operated.

Do not touch hot components such as exhaust system, radiator, engine, shock absorber and brakes. Allow these components to cool down before starting work on them.

Note

Danger of damage The parked vehicle may roll away or fall over.

Always place the vehicle on a firm and even surface.

Note

Fire hazard Some vehicle components become very hot when the vehicle is operated.

- Do not park the vehicle near flammable or explosive substances. Do not place objects on the vehicle while it is still warm from being run. Always let the vehicle cool first.
- Brake the motorcycle.
- Shift gear to neutral.
- Park the motorcycle on firm ground.

Refueling

Danger

Fire hazard Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

Warning

Danger of poisoning Fuel is poisonous and a health hazard.

Avoid contact of the fuel with skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel.

Note

Material damage Premature clogging of the fuel filter.

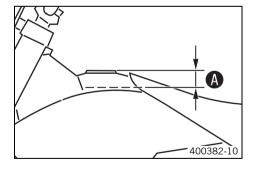

- In some countries and regions, the available fuel quality and cleanliness may not be sufficient. This will result in problems with the fuel system. (Your authorized KTM workshop will be glad to help.)
- Only refuel with clean fuel that meets the specified standards.

Warning

Environmental hazard Improper handling of fuel is a danger to the environment.

- Do not allow fuel to get into the ground water, the ground, or the sewage system.

- Switch off the engine.
- Open the filler cap. (♥ p. 11)
- Fill the fuel tank with fuel up to measurement **3**.
 Guideline

Measurement of A		35 mm (1.38 in)		
		Super unleaded (ROZ 95 / RON 95 / PON 91) (p. 94)		
Total fuel tank capacity, approx. (XC-F)	9.5 l (2.51 US gal)	Super unleaded (ROZ 95 / RON 95 / PON 91) (p. 94)		

Close the filler cap. (* p. 11)

Service schedule

	S1N	\$10A	S20A	S30A
Read out the fault memory using the KTM diagnostics tool.	•	•	•	•
Check and charge the battery.		•	•	•
Change the engine oil and oil filter, clean the oil screen. ♣ (p. 73)	•	•	•	•
Check the front brake linings. (* p. 54)		•	•	•
Check the rear brake linings. (* p. 58)		•	•	•
Check the brake discs. (* p. 52)		•	•	•
Check the brake lines for damage and leakage.		•	•	•
Check the rear brake fluid level. (* p. 57)		•	•	•
Change the foot brake cylinder seals. 🌂			•	
Check the free travel of the foot brake lever. (p. 56)		•	•	•
Check the frame and swingarm. 🌂		•	•	•
Check the swingarm bearing.			•	
Check the shock absorber linkage. 🌂		•	•	•
Conduct a minor fork service.		•	•	•
Conduct a major fork service.				•
Check the tire condition. (* p. 62)	•	•	•	•
Check the tire air pressure. (* p. 63)	•	•	•	•
Check the wheel bearing for play.		•	•	•
Check the wheel hubs.		•	•	•
Check the rim run-out.	•	•	•	•
Check the spoke tension. (* p. 63)	•	•	•	•
Check the chain, rear sprocket, engine sprocket and chain guide. (* p. 47)		•	•	•
Check the chain tension. (* p. 46)	•	•	•	•
Grease all moving parts (e.g., hand lever, chain,) and check for smooth operation.		•	•	•
Check the fluid level of the hydraulic clutch. (* p. 50)		•	•	•
Check the front brake fluid level. (* p. 53)		•	•	•
Check the free travel of the hand brake lever. (* p. 52)		•	•	•
Check the steering head bearing play. (* p. 37)	•	•	•	•
Check the valve clearance.	•		•	
Check the clutch.			•	
Check the fuel pressure.		•	•	•
Check all hoses (e. g. fuel, cooling, bleeding, drainage) and sleeves for tearing, leaks and incorrect routing.	•	•	•	•
Check the antifreeze and coolant level. (* p. 68)	•	•	•	•
Check the cables for damage and routing without sharp bends. 🌂		•	•	•
Check that the throttle cables are undamaged, routed without sharp bends and set correctly.	•	•	•	•
Clean the air filter and air filter box. 🌂 (* p. 42)		•	•	•
Change the glass fiber yarn filling of the main silencer. 🌂 (🕶 p. 43)		•	•	•
Check the screws and nuts for tightness. 🌂	•	•	•	•
Check the idle.	•	•	•	•
Final check: Check the vehicle for roadworthiness and take a test ride.	•	•	•	•
Read out the fault memory using the KTM diagnostics tool after a test ride.	•	•	•	•
Make the service entry in KTM DEALER.NET and in the service record.	•	•	•	•

\$1N: Once after 1 service hour - corresponds to about 7 liters of fuel (1.8 US gal)

\$10A: Every 10 service hours - corresponds to about 70 liters of fuel (18.5 US gal) / after every race

\$20A: Every 20 service hours - corresponds to about 140 liters of fuel (37 US gal)

\$30A: Every 30 service hours - corresponds to about 210 liters of fuel (55.5 US gal)

Service work (as additional order)

	\$20N	S40A	S50A	\$100A	J1A
Change the front brake fluid. 🔏					•
Change the rear brake fluid. 🔏					•
Change the hydraulic clutch fluid. 🌂 (* p. 50)					•
Grease the steering head bearing. ◀ (p. 38)					•
Service the shock absorber.	•	•			
Change the spark plug and spark plug connector.			•	•	
Change the piston.			•	•	
Check/measure the cylinder. ◀			•	•	
Check the cylinder head. 🔏			•	•	
Change the valves, valve springs and valve spring seats. 🌂			•	•	
Check the camshaft and cam lever			•	•	
Change the connecting rod, conrod bearing and crank pin. 🔏			•	•	
Check the transmission and shift mechanism. •			•	•	
Check the oil pressure regulator valve.			•	•	
Check the oil pumps and lubrication system.			•	•	
Check the timing assembly.			•	•	
Change all engine bearings.				•	

S20N: Once after 20 service hours - corresponds to about 140 liters of fuel (37 US gal)
S40A: Every 40 service hours - corresponds to about 280 liters of fuel (74 US gal)
S50A: Every 50 service hours - corresponds to about 350 liters of fuel (92.5 US gal)
S100A: Every 100 service hours - corresponds to about 700 liters of fuel (185 US gal)

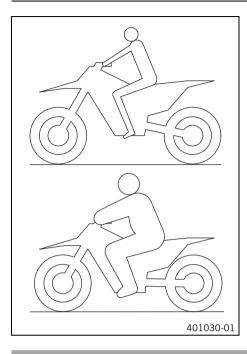

J1A: Annually

Checking the basic chassis setting with the rider's weight

Info

When adjusting the basic chassis setting, first adjust the shock absorber and then the fork.

- For optimal motorcycle riding characteristics and to avoid damage to forks, shock absorbers, swingarm and frame, the basic settings of the suspension components must match the rider's weight.
- As delivered, KTM offroad motorcycles are adjusted for an average rider's weight (with full protective clothing).

Guideline

Standard rider weight 75... 85 kg (165... 187 lb.)

- If the rider's weight is above or below this range, the basic setting of the suspension components must be adjusted accordingly.
- Small weight differences can be compensated by adjusting the spring preload, but in the case of large weight differences, the springs must be replaced.

Compression damping of the shock absorber

The compression damping of the shock absorber is divided into two ranges; high-speed and low-speed.

High-speed and low-speed refer to the compression speed of the rear wheel suspension and not to the vehicle speed.

The high-speed setting, for example, has an effect on the landing after a jump: the rear wheel suspension compresses more quickly. The low-speed setting, for example, has an effect when riding over long ground swells: the rear wheel suspension compresses more slowly.

These two ranges can be adjusted separately, although the transition between high-speed and low-speed is gradual. Thus, changes in the high-speed range affect the compression damping in the low-speed range and vice versa.

Adjusting the low-speed compression damping of the shock absorber

Caution

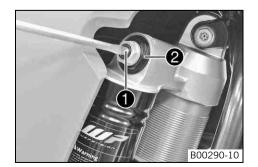

Danger of accidents Disassembly of pressurized parts can lead to injury.

The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

Info

The low-speed setting can be seen during the slow to normal compression of the shock absorber.

 Turn adjusting screw • clockwise with a screwdriver up to the last perceptible click.

Info

Do not loosen nut **2**!

Turn back counterclockwise by the number of clicks corresponding to the shock absorber type.

Guideline

Compression damping, low-speed (All SX-F EU models)		
Comfort	17 clicks	
Standard	15 clicks	
Sport	13 clicks	
Compression damping, low-speed (SX-F USA)		
Comfort	17 clicks	
Standard	15 clicks	
Sport	13 clicks	
Compression damping, low-speed (XC-F)		
Comfort	17 clicks	
Standard	15 clicks	
Sport	13 clicks	

Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

Adjusting the high-speed compression damping of the shock absorber

Caution

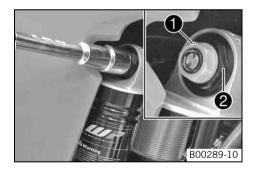

Danger of accidents Disassembly of pressurized parts can lead to injury.

The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

Info

The high-speed setting can be seen during the fast compression of the shock absorber.

- Turn adjusting screw 1 all the way clockwise with a socket wrench.

Info

Do not loosen nut 2!

 Turn back counterclockwise by the number of turns corresponding to the shock absorber type.

Guideline

Compression damping, high-speed (All SX-F EU models)		
Comfort	2.5 turns	
Standard	2 turns	
Sport	1.5 turns	
Compression damping, high-speed (SX-F USA)		
Comfort	2.5 turns	
Standard	2 turns	
Sport	1.5 turns	
Compression damping, high-speed (XC-F)		
Comfort	2.5 turns	
Standard	2 turns	
Sport	1.5 turns	

Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

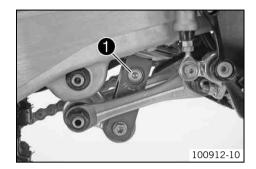

Adjusting the rebound damping of the shock absorber

Caution

Danger of accidents Disassembly of pressurized parts can lead to injury.

- The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

- Turn adjusting screw clockwise up to the last perceptible click.
- Turn back counterclockwise by the number of clicks corresponding to the shock absorber type.

Guideline

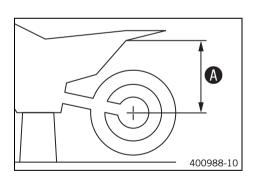

Rebound damping (All SX-F EU models)		
Comfort	17 clicks	
Standard	15 clicks	
Sport	13 clicks	
Rebound damping (SX-F USA)		
Comfort	17 clicks	
Standard	15 clicks	
Sport	13 clicks	
Rebound damping (XC-F)		
Comfort	17 clicks	
Standard	15 clicks	
Sport	13 clicks	

Info

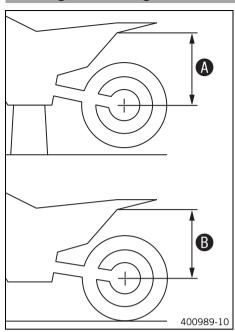

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

Measuring rear wheel sag unloaded

- Raise the motorcycle with the lift stand. (* p. 32)
- Measure the vertical distance between the rear axle and a fixed point such as a marking on the side cover.
- Note down the value as dimension A.
- Remove the motorcycle from the lift stand. (* p. 32)

Checking the static sag of the shock absorber

- Measure distance **④** of rear wheel unloaded. (**☞** p. 26)
- Hold the motorcycle upright with the aid of an assistant.
- Measure the distance between the rear axle and the fixed point again.
- Note down the value as dimension **3**.

i

Info

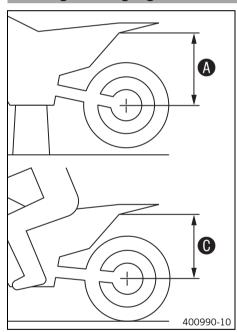

The static sag is the difference between measurements $oldsymbol{0}$ and $oldsymbol{0}$.

Check the static sag.

Static sag (All SX-F EU models)	30 mm (1.18 in)
Static sag (SX-F USA)	34 mm (1.34 in)
Static sag (XC-F)	35 mm (1.38 in)

- » If the static sag is less or more than the specified value:
 - Adjust the spring preload of the shock absorber.
 (* p. 27)

Checking the riding sag of the shock absorber

- Measure distance
 Φ of rear wheel unloaded. (▼ p. 26)
- With another person holding the motorcycle, the rider, wearing full protective clothing, sits on the seat in a normal sitting position (feet on footrests) and bounces up and down a few times.
 - ✓ The rear wheel suspension levels out.
- Another person now measures the distance between the rear axle and a fixed point.
- Note down the value as dimension **©**.

Info

The riding sag is the difference between measurements $oldsymbol{\Theta}$ and $oldsymbol{\Theta}$.

- Check the riding sag.

Riding sag (All SX-F EU models)	90 mm (3.54 in)
Riding sag (SX-F USA)	100 mm (3.94 in)
Riding sag (XC-F)	100 mm (3.94 in)

- » If the riding sag differs from the specified measurement:
 - Adjust the riding sag. 4 (* p. 28)

Adjusting the spring preload of the shock absorber 4

Caution

Danger of accidents Disassembly of pressurized parts can lead to injury.

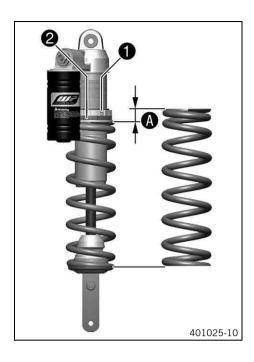

The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

Info

Before changing the spring preload, make a note of the present setting, e.g., by measuring the length of the spring.

- Remove the shock absorber. [→] (* p. 39)
- After removing the shock absorber, clean it thoroughly.

- Loosen screw 1.
- Turn adjusting ring 2 until the spring is no longer under tension.

Hook wrench (T106S)

- Measure the overall spring length when not under tension.
- Tighten the spring by turning adjusting ring 2 to measurement 4.
 Guideline

Spring preload (All SX-F EU models)	15 mm (0.59 in)
Spring preload (SX-F USA)	12 mm (0.47 in)
Spring preload (XC-F)	12 mm (0.47 in)

i

Info

Depending on the static sag and/or the riding sag, it may be necessary to increase or decrease the spring preload.

Tighten screw ①.

Guideline

Screw, shock absorber adjusting ring (All SX-F EU models)	M5	5 Nm (3.7 lbf ft)
Screw, shock absorber adjusting ring (SX-F USA)	M5	5 Nm (3.7 lbf ft)
Screw, shock absorber adjusting ring (XC-F)	M5	5 Nm (3.7 lbf ft)

– Install the shock absorber. 🔌 (🖛 p. 39)

Adjusting the riding sag 🔌

- Remove the shock absorber. 4 (* p. 39)
- After removing the shock absorber, clean it thoroughly.
- Choose and mount a suitable spring.

Guideline

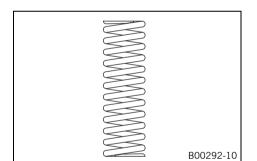

Spring rate (All SX-F EU models)		
Weight of rider: 65 75 kg (143 165 lb.)	51 N/mm (291 lb/in)	
Weight of rider: 75 85 kg (165 187 lb.)	54 N/mm (308 lb/in)	
Weight of rider: 85 95 kg (187 209 lb.)	57 N/mm (325 lb/in)	
Spring rate (SX-F USA)		
Weight of rider: 65 75 kg (143 165 lb.)	48 N/mm (274 lb/in)	
Weight of rider: 75 85 kg (165 187 lb.)	51 N/mm (291 lb/in)	
Weight of rider: 85 95 kg (187 209 lb.)	54 N/mm (308 lb/in)	
Spring rate (XC-F)		
Weight of rider: 65 75 kg (143 165 lb.)	51 N/mm (291 lb/in)	
Weight of rider: 75 85 kg (165 187 lb.)	54 N/mm (308 lb/in)	
Weight of rider: 85 95 kg (187 209 lb.)	57 N/mm (325 lb/in)	

lnf∩

The spring rate is shown on the outside of the spring.

- Install the shock absorber.
 [▲] (* p. 39)
- Raise the motorcycle with the lift stand. (* p. 32)
- Check the riding sag of the shock absorber. (♥ p. 27)
- Adjust the rebound damping of the shock absorber. (p. 26)

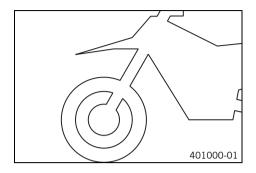

Checking the basic setting of the fork

Info

For various reasons, no exact riding sag can be determined for the forks.

- As with the shock absorber, smaller differences in the rider's weight can be compensated by the spring preload.
- However, if the fork is often overloaded (hard end stop on compression), harder springs must be fit to avoid damage to the fork and frame.

Adjusting the compression damping of the fork

Info

The hydraulic compression damping determines the fork suspension behavior.

Turn adjusting screws • clockwise all the way.

Info

Adjusting screws **①** are located at the top end of the fork legs. Make the same adjustment on both fork legs.

Turn back counterclockwise by the number of clicks corresponding to the fork type.
 Guideline

Compression damping (All SX-F EU models)		
Comfort	14 clicks	
Standard	12 clicks	
Sport	10 clicks	
Compression damping (SX-F USA)		
Comfort	14 clicks	
Standard	12 clicks	
Sport	10 clicks	
Compression damping (XC-F)		
Comfort	14 clicks	
Standard	12 clicks	
Sport	10 clicks	

Info

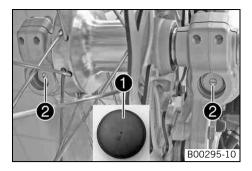

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

Adjusting the rebound damping of the fork

Info

The hydraulic rebound damping determines the fork suspension behavior.

- Remove protection caps ①.
- Turn adjusting screws 2 clockwise all the way.

i

Info

Adjusting screws **2** are located at the bottom end of the fork legs. Make the same adjustment on both fork legs.

Turn back counterclockwise by the number of clicks corresponding to the fork type.
 Guideline

Rebound damping (All SX-F EU models)		
Comfort	14 clicks	
Standard	12 clicks	
Sport	10 clicks	
Rebound damping (SX-F USA)		
Comfort	14 clicks	
Standard	12 clicks	
Sport	10 clicks	
Rebound damping (XC-F)		
Comfort	14 clicks	
Standard	12 clicks	
Sport	10 clicks	

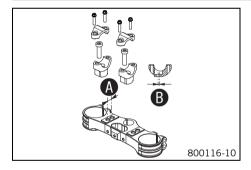

Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

Mount protection covers ①.

Handlebar position

On the upper triple clamp, there are two holes at a distance of $oldsymbol{0}$ to each other.

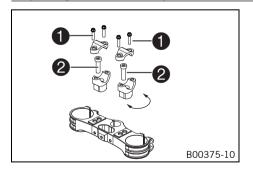

Hole distance A	15 mm (0.59 in)
-----------------	-----------------

The holes on the handlebar support are placed at a distance of **6** from the center.

Hole distance B	3.5 mm (0.138 in)
TIOIC distance b	3.3 111111 (0.130 111	,

The handlebar can be mounted in four different positions. In this way, the handlebar can be mounted in the position that is most comfortable for the rider.

Adjusting the handlebar position 🔏

 Remove the four screws ①. Remove the handlebar clamp. Remove the handlebar and lay it to one side.

Info

Protect the motorcycle and its attachments against damage by covering them.

Do not bend the cables and lines.

- Remove screws 2. Remove the handlebar support.
- Place the handlebar support in the required position. Mount and tighten screws ②.
 Guideline

Screw, handlebar support	M10	40 Nm	Loctite® 243™
		(29.5 lbf ft)	

Info

Position the left and right handlebar supports evenly.

Position the handlebar.

Info

Make sure cables and wiring are positioned correctly.

Position the handlebar clamp. Mount and evenly tighten the four screws ①.
 Guideline

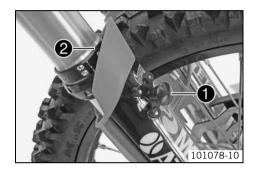

Screw, handlebar clamp	M8	20 Nm
		(14.8 lbf ft)

Activating the Factory Start (SX-F MUSQUIN REPLICA)

Info

In cold weather, the lock button may freeze up, preventing it from being released during compression.

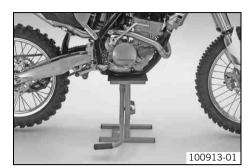

- Check lock button to ensure it can move easily.
- Bend over the handlebars while sitting on the motorcycle. Grip the rim and compress the fork. Press lock button and decompress slowly until the lock button engages in lock ring ②.
 - When the fork compresses for the first time, the lock button is released automatically.

Raising the motorcycle with the lift stand

Note

Danger of damage The parked vehicle may roll away or fall over.

Always place the vehicle on a firm and even surface.

- Raise the motorcycle at the frame underneath the engine.
 - ✓ The wheels must no longer touch the ground.
- Secure the motorcycle against falling over.

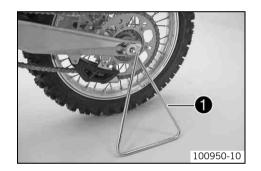

Lift stand (54829055000)

Removing the motorcycle from the lift stand

Note

Danger of damage The parked vehicle may roll away or fall over.

Always place the vehicle on a firm and even surface.

(All SX-F models

- Remove the motorcycle from the lift stand.
- Remove the lift stand.
- To park the motorcycle, insert plug-in stand into the left side of the wheel spindle.

nfo

Remove the plug-in stand before starting on a trip.

(XC-F)

101084-10

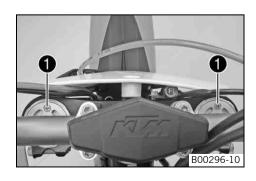

- Remove the motorcycle from the lift stand.
- Remove the lift stand.
- To park the motorcycle, press side stand to the ground with your foot and lean the motorcycle on it.

Info

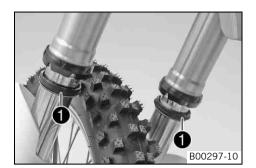

When you are riding, the side stand must be folded up and secured with the rubber band.

Bleeding the fork legs

- Raise the motorcycle with the lift stand. (p. 32)
- Remove bleeder screws briefly.
 - ✓ Any excess pressure escapes from the interior of the fork.
- Mount and tighten bleeder screws.
- Remove the motorcycle from the lift stand. (* p. 32)

Cleaning the dust boots of the fork legs

- Raise the motorcycle with the lift stand. (* p. 32)
- Loosen the fork protection. (* p. 33)
- Push dust boots 1 of both fork legs downwards.

Info

The dust boots should remove dust and coarse dirt particles from the fork tubes. Over time, dirt can penetrate behind the dust boots. If this dirt is not removed, the oil seals behind can start to leak.

Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.
- Clean and oil the dust boots and inner fork tube of both fork legs.

Universal oil spray (* p. 96)

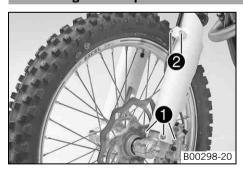

- Press the dust boots back into their normal position.
- Remove excess oil.
- Position the fork protection. (* p. 33)
- Remove the motorcycle from the lift stand. (* p. 32)

Loosening the fork protection

- Remove screws 1 and take off the clamp.
- Remove screws ② on the left fork leg. Push the fork protection downwards.
- Remove the screws on the right fork leg. Push the fork protection downwards.

Positioning the fork protection

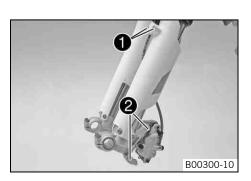

Position the fork protection on the left fork leg. Mount and tighten screws ①.
 Guideline

Remaining screws, chassis M6 10 Nm (7.4 lbf ft)

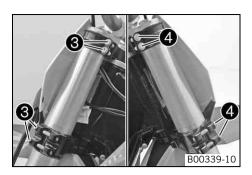

- Position the brake line and clamp. Mount and tighten screws 2.
- Position the fork protection on the right fork leg. Mount and tighten the screws. Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

Removing the fork legs 🔌

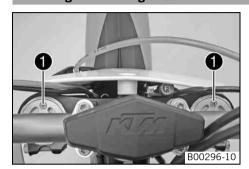

- Remove the front wheel. 🔌 (🕶 p. 60)
- Remove screws 1 and take off the clamp.
- Remove screws 2 and take off the brake caliper.
- Allow the brake caliper and brake line to hang tension-free to the side.

- Loosen screws 3. Take out the left fork leg.
- Unscrew screws 4. Take out the right fork leg.

Installing the fork legs 🔌

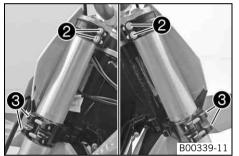

Position the fork legs.

Info

The upper milled groove in the fork leg must be flush with the top edge of the upper triple clamp.

Position bleeder screws 1 toward the front.

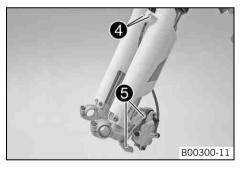

- Tighten screws 2.

Guideline

Screw, top triple clamp	M8	17 Nm
		(12.5 lbf ft)

Tighten screws 3.

Guideline

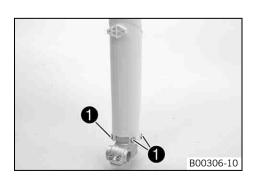

Position the brake caliper. Mount and tighten screws **⑤**.
 Guideline

Screw, front brake caliper	M8	25 Nm	Loctite® 243™
		(18.4 lbf ft)	

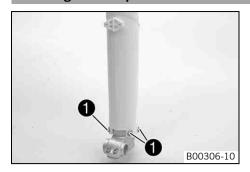

- Position the brake line and clamp. Mount and tighten screws 4.
- Install the front wheel. ⁴ (▼ p. 60)

Removing the fork protector 🔏

- Remove the fork legs. 🔌 (🕶 p. 33)
- Remove screws $oldsymbol{0}$ on the left fork leg. Remove the fork protector from above.
- Remove the screws on the right fork leg. Remove the fork protector from above.

Installing the fork protector 🔦

Position the fork protection on the left fork leg. Mount and tighten screws ①.
 Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

Position the fork protection on the right fork leg. Mount and tighten the screws.
 Guideline

Domaining serous chassis	ME	10 Nm (7 4 lbf ft)
Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)

– Install the fork legs. 🔌 (🕶 p. 34)

Removing the lower triple clamp 🔏

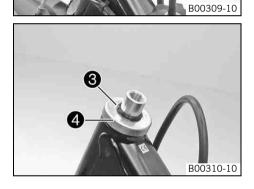

- Remove the start number plate. (* p. 38)
- Remove the front fender. (* p. 38)
- Remove screw 1.
- Remove screw 2.
- Take off the top triple clamp with the handlebar and set it aside.

Info

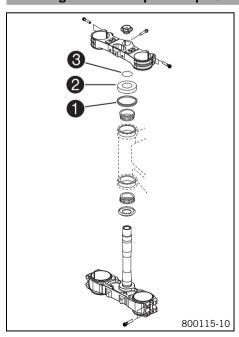

Protect the motorcycle and its attachments against damage by covering them

Do not bend the cables and lines.

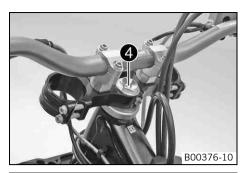

- Remove O-ring 3. Remove protective ring 4.
- Take out the lower triple clamp with the steering stem.
- Take out the upper steering head bearing.

Installing the lower triple clamp 🔌

- Clean the bearing and sealing elements, check for damage, and grease.
 - High viscosity grease (* p. 95)
- Insert the lower triple clamp with the steering stem. Mount the upper steering head bearing.
- Check whether the top steering head seal lacktriangle is correctly positioned.
- Slide on protective ring 2 and 0-ring 3.

- Position the upper triple clamp with the steering.
- Mount screw 4 but do not tighten yet.

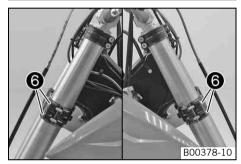

- Position the fork legs.

Info

The upper milled groove in the fork leg must be flush with the top edge of the upper triple clamp.

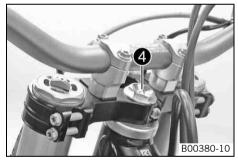

Position bleeder screws **5** toward the front.

Fully tighten screws 6.

Guideline

Screw, bottom triple clamp M8 12 Nm (8.9 lbf ft)

Tighten screw 4.

Guideline

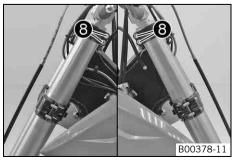

Screw, top steering head M20x1.5 10 Nm (7.4 lbf ft)

Mount and tighten screw 7.

Guideline

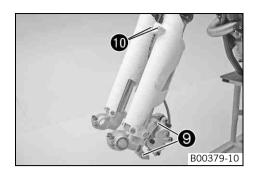

Screw, top steering stem M8 17 Nm (12.5 lbf ft) Loctite® 243TM

Fully tighten screws 8.

Guideline

Screw, top triple clamp	M8	17 Nm
		(12.5 lbf ft)

Position the brake caliper. Mount and tighten screws 9.
 Guideline

Screw, front brake caliper	M8	25 Nm (18.4 lbf ft)	Loctite® 243™
		(10.4 lb) 10	

- Position the brake line and clamp. Mount and tighten screws •.
- Install the front fender. (* p. 38)
- Install the start number plate. (♥ p. 38)
- Check that the wiring harness, cables, and brake and clutch lines can move freely and are routed correctly.
- Install the front wheel. 4 (* p. 60)
- Check the steering head bearing play. (* p. 37)

Checking the steering head bearing play

Warning

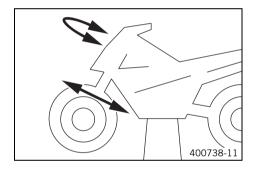

Danger of accidents Unstable vehicle handling from incorrect steering head bearing play.

Adjust the steering head bearing play without delay. (Your authorized KTM workshop will be glad to help.)

Info

If the bike is ridden with play in the steering head bearing, the bearing and the bearing seats in the frame can become damaged over time.

- Raise the motorcycle with the lift stand. (♥ p. 32)
- Move the handlebar to the straight-ahead position. Move the fork legs to and fro in the direction of travel.

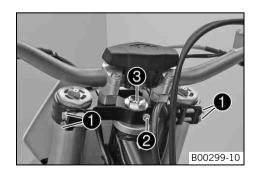

No play should be noticeable in the steering head bearing.

- » If there is noticeable play present:
 - Adjust the play of the steering head bearing. 4 (p. 37)
- Move the handlebar to and fro over the entire steering range.

The handlebar must be able to move easily over the entire steering range. No resting locations should be noticeable.

- » If click positions are noticeable:
 - Adjust the play of the steering head bearing. 4 (* p. 37)
 - Check the steering head bearing and change if necessary.
- Remove the motorcycle from the lift stand. (* p. 32)

Adjusting the play of the steering head bearing 4

- Raise the motorcycle with the lift stand. (* p. 32)
- Loosen screws 1. Remove screw 2.
- Loosen and retighten screw 3.

Guideline

Screw, top steering head M20x1.5 10 Nm (7.4 lbf ft)

- Using a plastic hammer, tap lightly on the upper triple clamp to avoid strains.
- Fully tighten screws ①.

Guideline

crew, top triple clamp	M8	17 Nm
		(12.5 lbf ft)

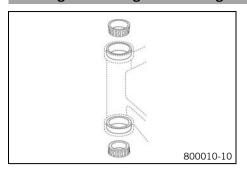

Mount and tighten screw ②.

Guideline

Screw, top steering stem	M8	17 Nm (12.5 lbf ft)	Loctite® 243™
--------------------------	----	------------------------	---------------

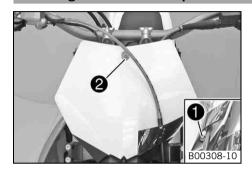

Check the steering head bearing play. (* p. 37)

Greasing the steering head bearing 4

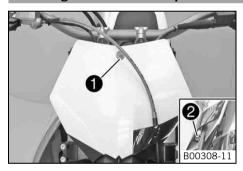

- Remove the lower triple clamp. ♣ (p. 35)

Removing the start number plate

- Remove screw and take off the clamp.
- Remove screw 2. Take off the start number plate.

Installing the start number plate

Position the start number plate. Mount and tighten screw ①.
 Guideline

Remaining screws, chassis M6 10 Nm (7.4 lbf ft)

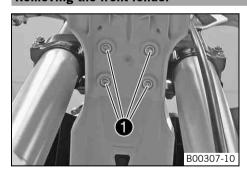

Info

Make sure that the holding lugs engage in the fender.

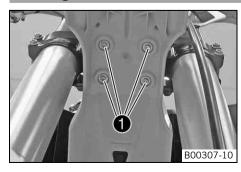

Position the brake line and clamp. Mount and tighten screw ②.

Removing the front fender

- Remove screws ①. Remove the front fender.
- Ensure that the spacers remain in place.

Installing the front fender

- Ensure that the spacers are mounted in the fender.
- Position the front fender. Mount and tighten screws ①.
 Guideline

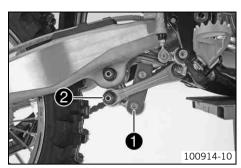

Remaining screws, chassis M6 10 Nm (7.4 lbf ft)

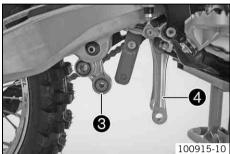

Info

Make sure the holding lugs engage in the start number plate.

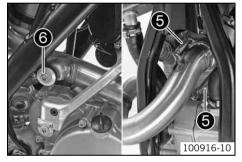

Removing the shock absorber 🔦

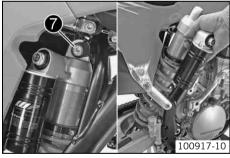

- Raise the motorcycle with the lift stand. (* p. 32)
- Remove the main silencer. (* p. 42)
- Remove screw 1.
- Remove screw cap ❷.

- Press angle lever 3 toward the rear.
- Press linkage lever 4 downward.

- Detach springs **6**.
 - Spring hooks (50305017000)
- Remove screw 6.
- Press the shock absorber toward the rear and remove the exhaust manifold.

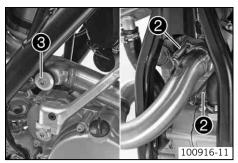

- Remove screw 0.
- Remove the shock absorber from the top.

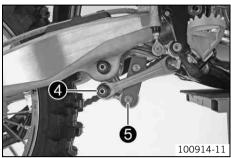

Installing the shock absorber 🔌

- Insert the shock absorber from above.
- Position the shock absorber.
- Mount and tighten screw ①.
 Guideline

Screw, top shock absorber	M10	60 Nm	Loctite® 2701
		(44.3 lbf ft)	

- Position the exhaust manifold.
- Attach springs 2.

Spring hooks (50305017000)

Mount and tighten screw 3.
 Guideline

Remaining screws, chassis	M8	25 Nm
		(18.4 lbf ft)

- Position the angle lever and linkage lever.
- Mount and tighten screw cap $oldsymbol{4}$.

Guideline

Nut, linkage lever to angle lever	M14x1.5	80 Nm (59 lbf ft)
-----------------------------------	---------	-------------------

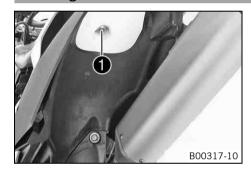

- Mount and tighten screw **6**.

Guideline

Screw, bottom shock	M10	60 Nm	Loctite® 2701
absorber		(44.3 lbf ft)	

- Install the main silencer. (* p. 42)
- Remove the motorcycle from the lift stand. (* p. 32)

Removing the seat

- Remove screw 1.
- Lift up the seat at the rear, pull it back and then remove it from above.

Mounting the seat

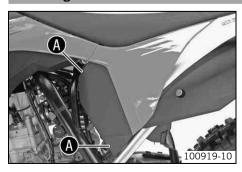

- Hook in the front of the seat at the collar bushing of the fuel tank, lower it at the rear and simultaneously it push forward.
- Make sure that the seat is correctly locked in.
- Mount and tighten the screw of the seat fixation.

Guideline

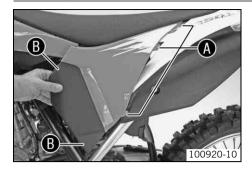

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

Removing the air filter box lid

Pull off the air filter box lid in area
 sideways and remove it toward the front.

Installing the air filter box lid

Insert the air filter box lid into the rear area
 and clip it into the front area
 ...

Removing the air filter 🔌

Note

Engine failure Unfiltered intake air has a negative effect on the service life of the engine.

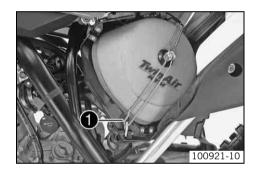

- Never ride the vehicle without an air filter since dust and dirt can get into the engine and result in increased wear.

Warning

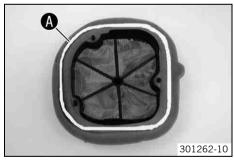

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

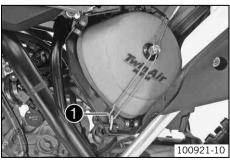

- Remove the air filter box lid. (* p. 40)
- Detach air filter holder at the bottom and swing it to one side. Remove the air filter with the air filter support.
- Remove the air filter from the air filter support.

Installing the air filter 🔌

- Mount the clean air filter onto the air filter support.
- Apply grease to the air filter around area •.

Long-life grease (* p. 95)

- Put in both parts together, position them and fix them with air filter holder 1.

Info

If the air filter is not correctly mounted, dust and dirt can penetrate into the engine and can cause damage.

- Install the air filter box lid. (* p. 41)

Cleaning the air filter and air filter box 🔦

Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

Info

Do not clean the air filter with fuel or petroleum since these substances attack the foam.

- Remove the air filter. 🔌 (🕶 p. 41)
- Wash the air filter thoroughly in special cleaning liquid and allow it to dry properly.

Air filter cleaner (p. 95)

Info

Only press the air filter to dry it, never wring it out.

- Oil the dry air filter with a high quality filter oil.

Oil for foam air filter (* p. 95)

- Clean the air filter box.
- Clean the intake flange and check it for damage and tightness.
- Install the air filter. 🔌 (🕶 p. 41)

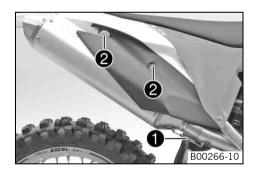

Removing the main silencer

Warning

Danger of burns The exhaust system gets very hot when the vehicle is driven.

Allow the exhaust system to cool down. Do not touch hot components.

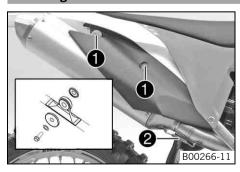

Disconnect spring ①.

Spring hooks (50305017000)

Remove screws 2 and take off the main silencer.

Installing the main silencer

Position the main silencer. Mount and tighten screws ①.
 Guideline

Remaining screws, chassis M6 10 Nm (7.4 lbf ft)

Reconnect spring ②.

Spring hooks (50305017000)

Changing the glass fiber varn filling of the main silencer 4

Warning

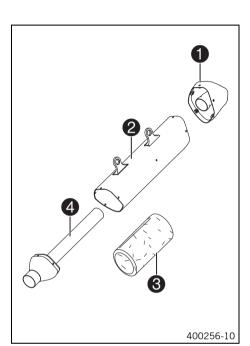

Danger of burns The exhaust system gets very hot when the vehicle is driven.

- Allow the exhaust system to cool down. Do not touch hot components.

Info

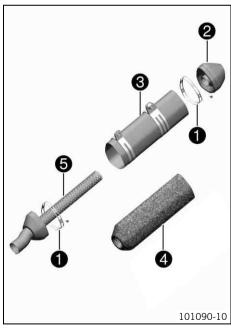

Over a period, the fibers of the insulating material vanish into the air, and the silencer "burns out". Not only is the noise level higher, the performance characteristic changes.

Remove the main silencer. (* p. 42)

(SX-F EU/USA, XC-F)

- Remove all screws from the main silencer. Remove locking cap and outer tube ②.
- Pull the glass fiber yarn filling 6 from inner tube 4.
- Clean the parts that are to be reinstalled.
- Mount the new glass fiber yarn filling 3 on the inner tube.
- Slide outer tube 2 over the glass fiber yarn filling.
- Insert locking cap 1 into the outer tube.
- Mount and tighten all screws.

(SX-F MUSQUIN REPLICA)

- Drill out all rivets on the main silencer and remove steel bands ①. Carefully hammer the rivets inward.
- Remove locking cap 2 and outer tube 3.
- Pull the glass fiber varn filling 4 from inner tube 5.
- Clean the parts that are to be reinstalled.
- Wind adhesive tape around the end of the inner tube.
- Mount the new glass fiber yarn filling 4 on the inner tube.
- Remove the adhesive tape from the inner tube.
- Slide outer tube 3 over the glass fiber yarn filling.
- Insert locking cap ② into the outer tube.
- Position steel bands 1 and mount the rivets.
- Install the main silencer. (* p. 42)

Removing the fuel tank &

Danger

Fire hazard Fuel is highly flammable.

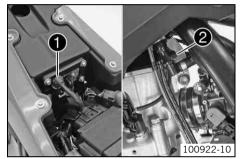

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no
 fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

Warning

Danger of poisoning Fuel is poisonous and a health hazard.

Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.

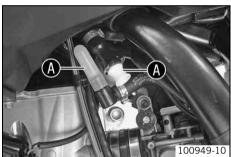

- Remove the seat. (* p. 40)
- Disconnect electric plug-in connection of the fuel pump.
- Thoroughly clean plug-in connection **2** of the fuel line using compressed air.

Info

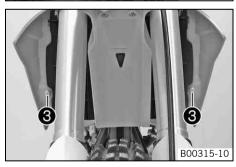

Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line will clog the fuel injection jets.

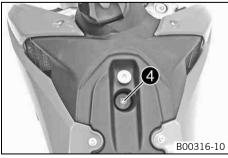

- Disconnect the plug-in connection of the fuel line.
- Mount wash cap set A.

Wash cap set (81212016000)

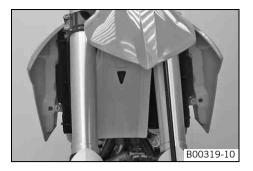

Remove the tube from the fuel tank breather.

Remove screws 3 with the collar bushing.

- Remove screw 4 with the rubber bushing.

- Pull both spoilers off of the sides of the radiator bracket and lift off the fuel tank.

Installing the fuel tank 🔏

Danger

Fire hazard Fuel is highly flammable.

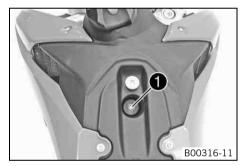

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

Warning

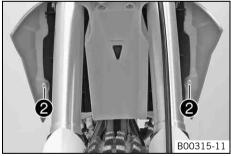

Danger of poisoning Fuel is poisonous and a health hazard.

Avoid contact of the fuel with skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel.

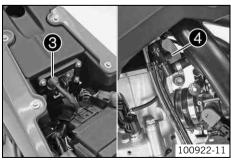

- Check the throttle cable routing. (* p. 49)
- Position the fuel tank and fit the two spoilers to the sides of the radiator bracket.
- Make sure that no cables are trapped or damaged.
- Mount the fuel tank breather.
- Mount and tighten screw with the rubber bushing.
 Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
rearranting continue, criacone		20 (//

Mount and tighten screws ② with the collar bushing.
 Guideline

Remaining screws, chassis M6 10 Nm (7.4 lbf ft)

- Connect the electrical plug-in connection 3.
- Thoroughly clean the plug-in connection of the fuel line using compressed air.

Info

Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line will clog the fuel injection jets.

Remove the wash cap set. Lubricate the O-ring and connect plug-in connection of the fuel line.

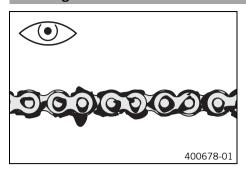

Info

Route the cable and fuel line at a safe distance from the exhaust system.

Mount the seat. (* p. 40)

Checking for chain dirt accumulation

- Check the chain for coarse dirt accumulation.
 - » If the chain is very dirty:
 - Clean the chain. (* p. 46)

Cleaning the chain

Warning

Danger of accidents Oil or grease on the tires reduces their grip.

- Remove oil and grease with a suitable cleaning material.

Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

Warning

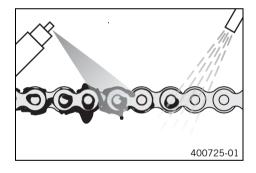

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

Info

The service life of the chain depends largely on its maintenance.

Clean the chain regularly and then treat with chain spray.

Chain cleaner (p. 95)

Off-road chain spray (p. 95)

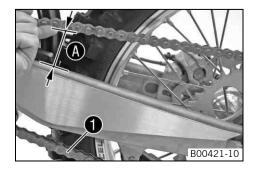

Checking the chain tension

Warning

Danger of accidents Danger caused by incorrect chain tension.

— If the chain tension is too high, the components of the secondary power train (chain, engine sprocket, rear sprocket, bearings in transmission and rear wheel) are under additional load. Apart from premature wear, in extreme cases the chain can rupture or the countershaft of the transmission can break. On the other hand, if the chain is loose, it can fall off the engine sprocket or the rear sprocket and block the rear wheel or damage the engine. Check the chain tension and correct if necessary.

- Raise the motorcycle with the lift stand. (* p. 32)
- Push the chain at the end of the chain sliding component upwards to measure the chain tension .

Info

The lower chain section **1** must be taut.

Chain wear is not always even, so you should repeat this measurement at different chain positions.

01 : 1 :	FF FO (0.17 0.00 ;)
Chain tension	55 58 mm (2.17 2.28 in)

- » If the chain tension does not meet specifications:
 - Adjust the chain tension. (* p. 47)
- Remove the motorcycle from the lift stand. (* p. 32)

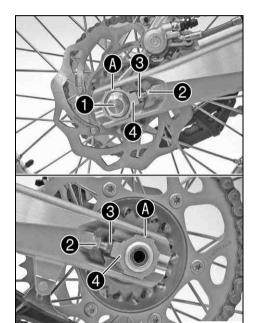

Adjusting the chain tension

Warning

Danger of accidents Danger caused by incorrect chain tension.

If the chain tension is too high, the components of the secondary power train (chain, engine sprocket, rear sprocket, bearings in transmission and rear wheel) are under additional load. Apart from premature wear, in extreme cases the chain can rupture or the countershaft of the transmission can break. On the other hand, if the chain is loose, it can fall off the engine sprocket or the rear sprocket and block the rear wheel or damage the engine. Check the chain tension and correct if necessary.

- Raise the motorcycle with the lift stand. (* p. 32)
- Check the chain tension. (* p. 46)
- Loosen nut ①.
- Loosen nuts ②.
- Adjust the chain tension by turning the adjusting screws 3 left and right.
 Guideline

Chain tension	55 58 mm (2.17 2.28 in)	
Turn adjusting screws 3 on the left and right so that the markings on the left and right chain adjusters are in the same position relative to the reference		
marks 4 . The rear wheel is then correctly aligned.		

- Tighten nuts ②.
- Make sure that chain adjusters @ are fitted correctly on adjusting screws @.
- Tighten nut ①.

Guideline

Nut, rear wheel spindle	M20x1.5	80 Nm (59 lbf ft)
-------------------------	---------	-------------------

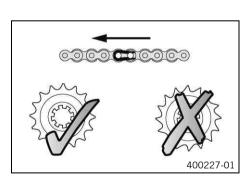

Info

The wide adjustment range of the chain adjusters (32 mm (1.18 in)) enables different secondary ratios with the same chain length. Chain adjusters 4 can be turned by 180°.

- Remove the motorcycle from the lift stand. (* p. 32)

Checking the chain, rear sprocket, engine sprocket and chain guide

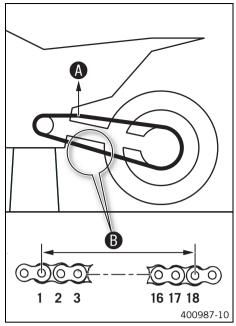

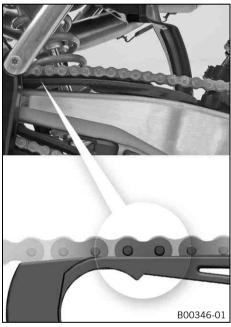

- Raise the motorcycle with the lift stand. (* p. 32)
- Shift gear to neutral.
- Check the rear sprocket and engine sprocket for wear.
 - » If the rear sprocket and engine sprocket are worn:
 - Replace the rear sprocket or engine sprocket.

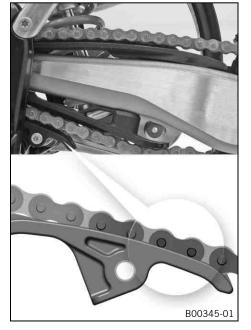

Info

The engine sprocket, rear sprocket and chain should always be replaced together.

Pull on the upper part of the chain with the specified weight 4.
 Guideline

Weight, chain wear measurement	10 15 kg (22 33 lb.)
--------------------------------	----------------------

- Measure the distance **9** of 18 chain links in the lower chain section.

Info

Chain wear is not always even, so you should repeat this measurement at different chain positions.

Maximum distance 3 at the longest	272 mm (10.71 in)
chain section	

- » If the distance **(3)** is greater than the specified measurement:
 - Replace the chain.

Info

When the chain is replaced, the rear sprocket and engine sprocket should also be changed.

New chains wear out faster on old, worn sprockets.

- Check the chain sliding guard for wear.
 - » If the bottom edge of the chain bolt is in line with or below the chain sliding guard:
 - Change the chain sliding guard. 🔌
- Check that the chain sliding guard is firmly seated.
 - » If the chain sliding guard is loose:
 - Tighten the chain sliding guard.

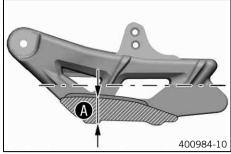

Guideline

Screw, chain sliding	M6	6 Nm	Loctite® 243™
guard		(4.4 lbf ft)	

- Check the chain sliding piece for wear.
 - » If the bottom edge of the chain bolt is in line with or below the chain sliding
 - Change the chain sliding piece.
- Check that the chain sliding piece is firmly seated.
 - » If the chain sliding piece is loose:
 - Tighten the chain sliding piece.

Guideline

Screw, chain sliding piece	M8	15 Nm (11.1 lbf ft)
		(

Measure material thickness **(A)** at the bottom of the chain guide.

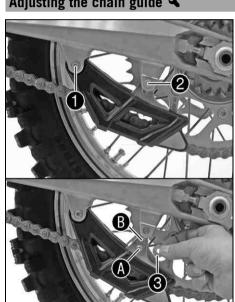

- If distance **(A)** is less than the specified measurement:
 - Change the chain guide.
- Check that the chain guide is firmly seated.
 - » If the chain guide is loose:
 - Tighten the chain guide.

Guideline

Remaining screws, chassis	M6	10 Nm
		(7.4 lbf ft)

Remove the motorcycle from the lift stand. (* p. 32)

Adjusting the chain guide 🔧

Loosen screw 1. Remove screw 2. Swing the chain guide down.

Condition

Number of teeth: ≤ 44 teeth

- Insert collar bushing 3 in hole 4. Position the chain guide.
- Mount and tighten screw 2. Tighten screw 1.

Remaining screws, chassis	M6	10 Nm
		(7.4 lbf ft)

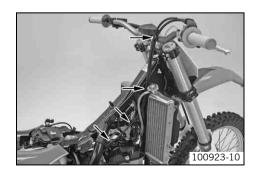

Condition

Number of teeth: ≥ 45 teeth

- Insert collar bushing 3 in hole B. Position the chain guide.
- Mount and tighten screw 2. Tighten screw 1. Guideline

Remaining screws, chassis	M6	10 Nm
_		(7.4 lbf ft)

Checking the throttle cable routing

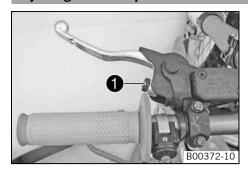

- Remove the fuel tank. 4 (* p. 44)
- Check the throttle cable routing.

Both throttle cables must be routed to the throttle valve body side by side behind the handlebars and above the tank bearing.

- » If the throttle cable is not routed as specified:
 - Correct the throttle cable routing.
- Install the fuel tank. 4 (* p. 45)

Adjusting the basic position of the clutch lever

 Adjust the basic setting of the clutch lever to your hand size by turning adjusting screw •.

Info

Turn the adjusting screw counterclockwise to decrease the distance between the clutch lever and the handlebar.

Turn the adjusting screw clockwise to increase the distance between the clutch lever and the handlebar.

The range of adjustment is limited.

Turn the adjusting screw by hand only, and do not apply any force.

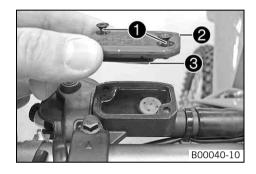

Do not make any adjustments while riding!

Checking the fluid level of the hydraulic clutch

Info

The fluid level rises with increased wear of the clutch lining discs.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
- Remove cover ② with membrane ③.
- Check the fluid level.

Fluid level below container rim

4 mm (0.16 in)

- » If the fluid level does not meet specifications:
 - Correct the fluid level of the hydraulic clutch.

Brake fluid DOT 4 / DOT 5.1 (* p. 93)

- Position the cover with the membrane. Mount and tighten the screws.

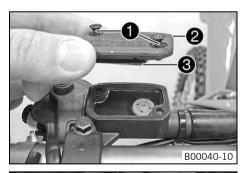

Changing the hydraulic clutch fluid 🔦

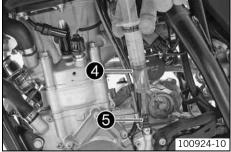

Warning

Environmental hazard Hazardous substances cause environmental damage.

Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.

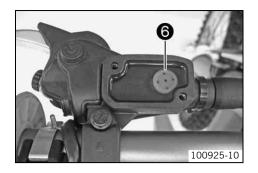

Fill bleeding syringe 4 with the appropriate hydraulic fluid.

Bleed syringe (50329050000)

Brake fluid DOT 4 / DOT 5.1 (p. 93)

On the slave cylinder, remove bleeder screw 6 and mount bleeding syringe 4.

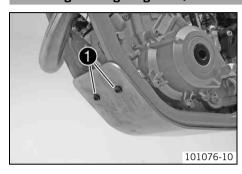

- Inject the liquid into the system until it escapes from hole 6 of the master cylinder without bubbles.
- To prevent overflow, drain fluid occasionally from the master cylinder reservoir.
- Remove the bleeding syringe. Mount and tighten screws bleeder screw.
- Correct the fluid level of the hydraulic clutch.
 Guideline

Fluid level below container rim 4 mm (0.16 in)

- Position the cover with the membrane. Mount and tighten the screws.

Removing the engine guard (SX-F MUSQUIN REPLICA)

- Remove screws • and the holding bracket. Remove the engine guard.

Installing the engine guard (SX-F MUSQUIN REPLICA)

- Attach the engine guard on the frame at the rear and swing up at the front.
- Position the holding bracket. Mount and tighten the screws.
 Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

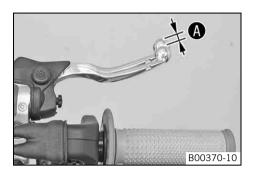

Checking the free travel of the hand brake lever

Warning

Danger of accidents Brake system failure.

If there is no free travel on the hand brake lever, pressure builds up in the front brake circuit. The front brake can fail due
to overheating. Adjust free travel on hand brake lever according to specifications.

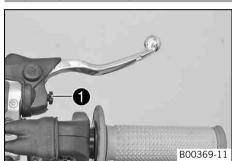

Push the hand brake lever forward and check free travel ...

Free travel of hand brake lever	≥ 3 mm (≥ 0.12 in)
---------------------------------	--------------------

- » If the free travel does not meet specifications:
 - Adjust the basic position of the hand brake lever. (* p. 52)

Adjusting the basic position of the hand brake lever

- Check the free travel of the hand brake lever. (* p. 52)
- Adjust the basic setting of the hand brake lever to your hand size by turning adjusting screw 1.

Info

Turn the adjusting screw clockwise to increase the distance between the hand brake lever and the handlebar.

Turn the adjusting screw counterclockwise to decrease the distance between the hand brake lever and the handlebar.

The range of adjustment is limited.

Turn the adjusting screw by hand only, and do not apply any force.

Do not make any adjustments while riding!

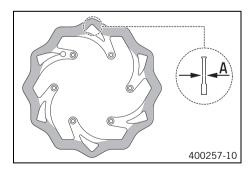

Checking the brake discs

Warning

Danger of accidents Reduced braking efficiency due to worn brake disc(s).

- Change the worn brake disc(s) without delay. (Your authorized KTM workshop will be glad to help.)

 Check the thickness of the front and rear brake discs at several places on the disk to see if it conforms to measurement .

Info

Wear reduces the thickness of the brake disc around the area used by the brake linings.

Brake discs - wear limit	
Front	2.5 mm (0.098 in)
Rear	3.5 mm (0.138 in)

- If the brake disc thickness is less than the specified value:
 - Change the brake disc.
- Check the front and rear brake discs for damage, cracking and deformation.
 - » If the brake disc shows signs of damage, cracking or deformation:
 - Change the brake disc.

Checking the front brake fluid level

Warning

Danger of accidents Failure of the brake system.

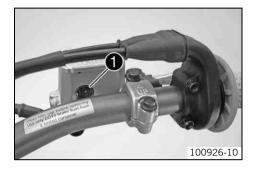

If the brake fluid level falls below the MIN mark, this indicates a leakage in the brake system or worn-out brake linings.
 Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

Warning

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Check the brake fluid level in the viewer ①.
 - » If the brake fluid is below the **MIN** marking:
 - Add front brake fluid. 4 (* p. 53)

Adding front brake fluid 🔌

Warning

Danger of accidents Failure of the brake system.

- If the brake fluid level falls below the **MIN** mark, this indicates a leakage in the brake system or worn-out brake linings. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid comes into contact with the eyes, flush the eyes thoroughly with water and consult a physician immediately.

Warning

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

Warning

Environmental hazard Hazardous substances cause environmental damage.

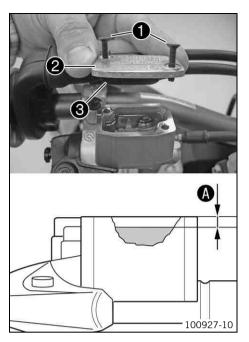

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container.

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
- Remove cover **2** with membrane **3**.
- Add brake fluid to level **(a)**.
 Guideline

Dimension (brake fluid level below	5 mm (0.2 in)
top edge of container)	

Brake fluid DOT 4 / DOT 5.1 (***** p. 93)

- Position the cover with the membrane. Mount and tighten the screws.

Info

Clean up overflowed or spilt brake fluid immediately with water.

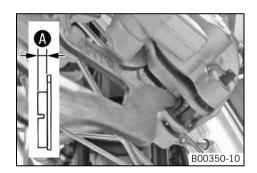

Checking the front brake linings

Warning

Danger of accidents Reduced braking efficiency caused by worn brake linings.

Change worn brake linings immediately. (Your authorized KTM workshop will be glad to help.)

Check the brake linings for minimum thickness **a**.

Minimum thickness **①** ≥ 1 mm (≥ 0.04 in)

- » If the minimum thickness is less than specified:
- Check the brake linings for damage and cracking.
 - » If damage or cracking is visible:
 - Change the front brake linings. ⁴ (* p. 54)

Changing the front brake linings 🔌

Warning

Danger of accident Brake system failure.

- Maintenance work and repairs must be carried out professionally. (Your authorized KTM workshop will be glad to help.)

Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid comes into contact with the eyes, flush the eyes thoroughly with water and consult a physician immediately.

Warning

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

Warning

Environmental hazard Hazardous substances cause environmental damage.

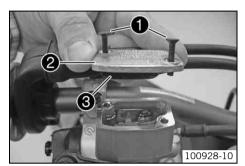

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

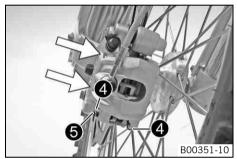

Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container.

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
 - Remove screws ①.
 - Remove cover 2 with membrane 3.

 Press the brake caliper toward the brake disc to push back the brake pistons and ensure that no brake fluid runs out of the brake fluid reservoir, sucking it off if it does.

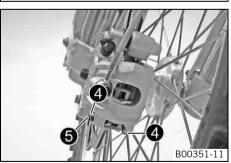

Info

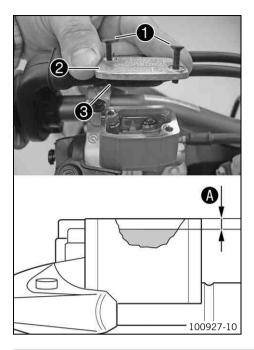

Make sure when pushing back the brake pistons that you do not press the brake caliper against the spokes.

- Remove the locking split pins **4**, pull out pin **5** and remove the brake linings.
- Clean the brake caliper and brake caliper support.
- Check that leaf spring 6 in the brake caliper and sliding plate 7 in the brake caliper support are seated correctly.

- Insert the brake linings, insert pin 6, and mount locking split pins 6.
- Operate the hand brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

Add brake fluid to level **4**.
 Guideline

Dimension (brake fluid level below top edge of container)

5 mm (0.2 in)

Brake fluid DOT 4 / DOT 5.1 (* p. 93)

- Position cover ② with membrane ③.
- Mount and tighten screws ①.

Info

Clean up overflowed or spilt brake fluid immediately with water.

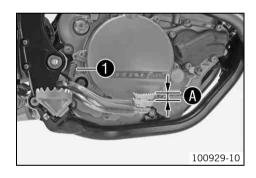

Checking the free travel of foot brake lever

Warning

Danger of accidents Brake system failure.

If there is no free travel on the foot brake lever, pressure builds up on the rear brake circuit. The rear brake can fail due to
overheating. Adjust free travel on foot brake lever according to specifications.

- Disconnect spring ①.
- Move the foot brake lever back and forth between the end stop and the contact to the foot brake cylinder piston and check free travel .
 Guideline

Free travel at foot brake lever 3... 5 mm (0.12... 0.2 in)

- » If the free travel does not meet specifications:
 - Adjust the basic position of the foot brake lever. ⁴ (♥ p. 56)
- Reconnect spring ①.

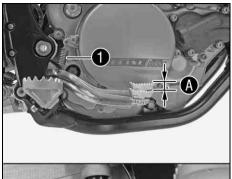

Adjusting the basic position of the foot brake lever 🔌

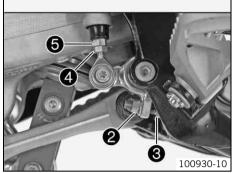

Warning

Danger of accidents Brake system failure.

- If there is no free travel on the foot brake lever, pressure builds up on the rear brake circuit. The rear brake can fail due to overheating. Adjust free travel on foot brake lever according to specifications.

- Disconnect spring ①.
- Loosen nut 4 and, with push rod 5, turn it back until you have maximum free travel
- To adjust the basic position of the foot brake lever individually, loosen nut ② and turn screw ③ accordingly.

Info

The range of adjustment is limited.

Turn push rod 6 accordingly until you have free travel 6. If necessary, adjust the basic position of the foot brake lever.

Guideline

Free travel at foot brake lever	3 5 mm (0.12 0.2 in)

- Hold push rod **6** and tighten nut **4**.

Guideline

Remaining nuts, chassis	M6	15 Nm
		(11.1 lbf ft)

- Hold screw 3 and tighten nut 2.

Guideline

Nut, foot brake lever stop	M8	20 Nm
		(14.8 lbf ft)

Reconnect spring ①.

Checking the rear brake fluid level

Warning

Danger of accidents Failure of the brake system.

If the brake fluid level falls below the MIN mark, this indicates a leakage in the brake system or worn-out brake linings.
 Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

Warning

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

- Stand the vehicle upright.
- Check the brake fluid level in the viewer 1.
 - » When in the viewer **1** an air bubble is visible:
 - Add rear brake fluid. 🔌 (🕶 p. 57)

Adding rear brake fluid 🔌

Warning

Danger of accidents Failure of the brake system.

If the brake fluid level falls below the MIN mark, this indicates a leakage in the brake system or worn-out brake linings.
 Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid comes into contact with the eyes, flush the eyes thoroughly with water and consult a physician immediately.

Warning

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

Warning

Environmental hazard Hazardous substances cause environmental damage.

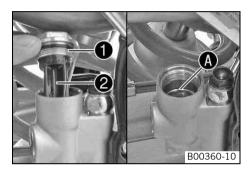

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container.

- Stand the vehicle upright.
- Remove screw cap with membrane and the O-ring.
- Add brake fluid to level A.

Brake fluid DOT 4 / DOT 5.1 (* p. 93)

Mount and tighten the screw cap with the membrane and O-ring.

Info

Clean up overflowed or spilt brake fluid immediately with water.

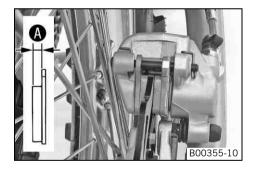

Checking the rear brake linings

Warning

Danger of accidents Reduced braking efficiency caused by worn brake linings.

- Change worn brake linings immediately. (Your authorized KTM workshop will be glad to help.)

Check the brake linings for minimum thickness **a**.

Minimum thickness **A**

≥ 1 mm (≥ 0.04 in)

- » If the minimum thickness is less than specified:
 - Change the rear brake linings. ⁴ (* p. 58)
- Check the brake linings for damage and cracking.
 - » If damage or cracking is visible:
 - Change the rear brake linings. 4 (* p. 58)

Changing the rear brake linings 🔌

Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid comes into contact with the eyes, flush the eyes thoroughly with water and consult a physician immediately.

Warning

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

Warning

Environmental hazard Hazardous substances cause environmental damage.

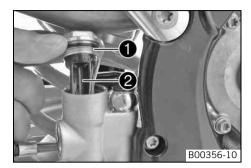

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

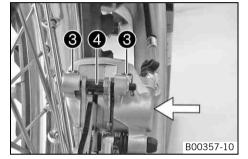

Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container.

- Stand the vehicle upright.
- Remove screw cap with membrane and the O-ring.

 Press the brake caliper toward the brake disc to push back the brake piston and ensure that no brake fluid runs out of the brake fluid reservoir, sucking it off if it does.

Info

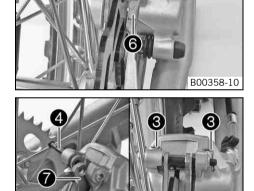

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

- Remove locking split pins 3, withdraw pin 4, and take out the brake linings.
- Clean the brake caliper and brake caliper support.
- Check that leaf spring in the brake caliper and sliding plate in the brake caliper support are seated correctly.

Info

The arrow on the leaf spring points in the rotation direction of the brake disc.

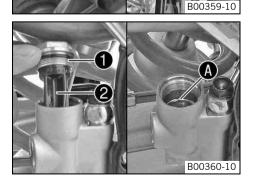

- Insert the brake linings, insert pin 4, and mount locking split pins 3.

Info

Make sure that the decoupling plate **1** is mounted on the piston side of the brake lining.

 Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

Add brake fluid to level •

Brake fluid DOT 4 / DOT 5.1 (* p. 93)

Mount and tighten screw cap • with membrane • and the O-ring.

Info

Clean up overflowed or spilt brake fluid immediately with water.

WHEELS, TIRES 60

Raise the motorcycle with the lift stand. (* p. 32)

Removing the front wheel

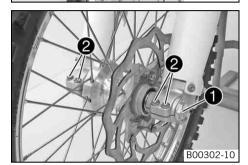

Press the brake caliper onto the brake disc by hand in order to push back the brake pistons.

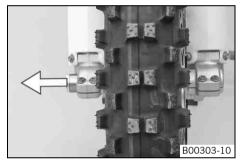

Info

Make sure when pushing back the brake pistons that you do not press the brake caliper against the spokes.

- Remove screw 1.
- Loosen screws 2.

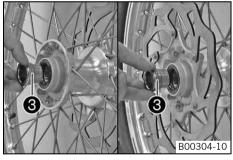

Holding the front wheel, withdraw the wheel spindle. Take the front wheel out of

Info

Do not pull the hand brake lever when the front wheel is removed. Always lay the wheel down in such a way that the brake disc is not damaged.

Remove spacers 3.

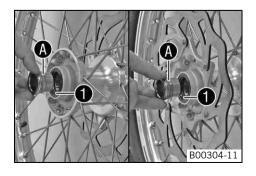

Installing the front wheel 🔌

Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

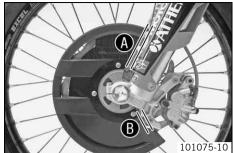

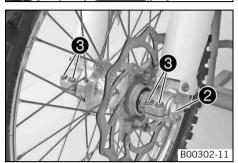

- Check the wheel bearing for damage and wear.
 - If the wheel bearing is damaged or worn:
 - Change the wheel bearing.
- Clean and grease the shaft seal rings **1** and contact surface **3** of the spacers.

Long-life grease (* p. 95)

- Insert the spacers.
- Lift the front wheel into the fork, position it, and insert the wheel spindle.

WHEELS, TIRES 61

(SX-F MUSQUIN REPLICA)

Align the brake disc guard so that gaps **3** and **3** are the same size.

Mount and tighten screw 2.

Guideline

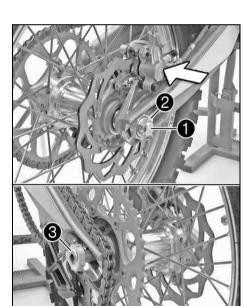

Screw, front wheel spindle	M24x1.5	45 Nm
		(33.2 lbf ft)

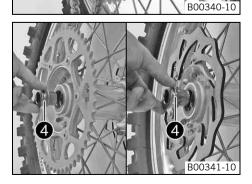

- Activate the hand brake lever multiple times until the brake linings are in contact with the brake disc.
- Remove the motorcycle from the lift stand. (* p. 32)
- Pull the front brake and compress the fork powerfully a few times.
 - ✓ The fork legs straighten.
- Tighten screws 3.

Guideline

Screw, fork stub	M8	15 Nm
		(11.1 lbf ft)

Removing the rear wheel 🔌

- Raise the motorcycle with the lift stand. (p. 32)
- Press the brake caliper onto the brake disc by hand in order to push back the brake piston.

Info

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

- Remove nut 1.
- Remove chain adjuster 2. Withdraw wheel spindle 3 only enough to allow the rear wheel to be pushed forward.
- Push the rear wheel forward as far as possible. Remove the chain from the rear sprocket.
- Holding the rear wheel, withdraw the wheel spindle. Take the rear wheel out of the swing arm.

Info

Do not operate the foot brake when the rear wheel is removed. Always lay the wheel down in such a way that the brake disc is not damaged.

Remove spacers 4.

WHEELS, TIRES 62

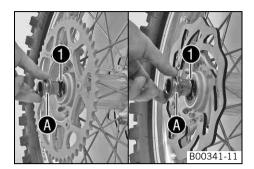

Installing the rear wheel

Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

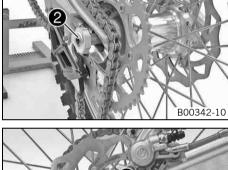

- Check the wheel bearing for damage and wear.
 - If the wheel bearing is damaged or worn:
 - Change the wheel bearing.
- Clean and grease the shaft seal rings **1** and contact surface **4** of the spacers.

Long-life grease (* p. 95)

Insert the spacers.

- Lift the rear wheel into the swing arm, position it, and insert the wheel spindle **2**.
- Put the chain on.

- Position chain adjuster 3. Mount nut 4, but do not tighten it yet.
- Make sure that chain adjusters 3 are fitted correctly on adjusting screws 5.
- Check the chain tension. (* p. 46)
- Tighten nut **4**.

Guideline

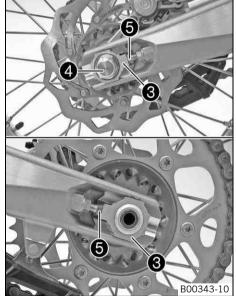

Nut, rear wheel spindle M20x1.5 80 Nm (59 lbf ft)

Info

The wide adjustment range of the chain adjusters (32 mm (1.18 in)) enables different secondary ratios with the same chain length. Chain adjusters 3 can be turned by 180°.

- Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.
- Remove the motorcycle from the lift stand. (* p. 32)

Checking the tire condition

Info

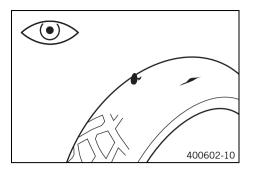

Only mount tires approved and/or recommended by KTM.

Other tires could have a negative effect on riding behavior.

The type, condition and air pressure of the tires all have an important impact on the riding behavior of the motorcycle.

The tires mounted on the front and rear wheels must have a similar profile.

Worn tires have a negative effect on riding behavior, especially on wet surfaces.

- Examine the front and rear tires for cuts, foreign bodies and other damage.
 - » If you find cuts, foreign bodies or other damage on a tire:
 - Change the tire.
- Check the depth of the tread.

i

Info

Note local national regulations concerning the minimum tread depth.

Minimum tread depth	≥ 2 mm (≥ 0.08 in)
---------------------	--------------------

- » If the tread depth is less than the minimum allowable depth:
 - Change the tire.
- Check the tire age.

Info

The tire manufacture date is usually included in the tire identification number and comprises the last four digits of the **DOT** code. The first two digits indicate the week of manufacture and the last two digits the year of manufacture.

KTM recommends that the tires be changed after 5 years at the latest, regardless of the actual state of wear.

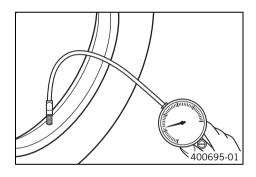

- » If the tire is older than five years:
 - Change the tire.

Checking the tire air pressure

Info

Low tire air pressure leads to abnormal wear and overheating of the tire. Correct tire air pressure ensures optimal riding comfort and maximum tire service life.

- Remove the dust cap.
- Check the tire air pressure when the tires are cold.

Tire air pressure, offroad	
Front	1.0 bar (15 psi)
Rear	1.0 bar (15 psi)

- » If the tire pressure does not meet specifications:
 - Correct the tire pressure.
- Mount the dust cap.

Checking the spoke tension

Warning

Danger of accidents Instable handling due to incorrect spoke tension.

Ensure that the spoke tension is correct. (Your authorized KTM workshop will be glad to help.)

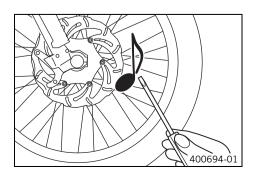

Info

A loose spoke causes wheel imbalance and rapidly leads to more loose spokes.

If the spokes are too tight, they can break due to local overload.

Check the spoke tension regularly, especially on a new motorcycle.

Briefly strike each spoke with the tip of a screwdriver.

Info

The tone frequency depends on the length of the spoke and the spoke diameter.

If you hear different tone frequencies from different spokes of equal length and diameter, this is an indication of different spoke tensions.

You should hear a high note.

- » If the spoke tension varies:
 - Correct the spoke tension.
- Check the spoke torque.

Guideline

Spoke nipple, front wheel	M4.5	5 6 Nm (3.7 4.4 lbf ft)
Spoke nipple, rear wheel	M4.5	5 6 Nm (3.7 4.4 lbf ft)

Torque wrench with various accessories in set (58429094000)

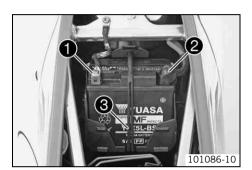

Removing the battery (XC-F)

Warning

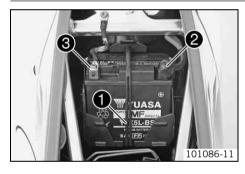

Risk of injury Battery acid and battery gases cause serious chemical burns.

- Keep batteries out of the reach of children.
- Wear suitable protective clothing and goggles.
- Avoid contact with battery acid and battery gases.
- Keep the battery away from sparks or open flames. Charge only in well-ventilated areas.
- In the event of skin contact, rinse with large amounts of water. If battery acid gets in the eyes, rinse with water for at least 15 minutes and contact a physician.

- Switch off all power consumers and switch off the engine.
- Remove the seat. (* p. 40)
- Disconnect the negative (minus) cable of the battery.
 - Pull back the positive terminal cover ② and disconnect the positive (plus) cable of the battery.
- Detach rubber band 3 from the bottom.
- Lift the battery out.

Installing the battery 🌂 (XC-F)

Place the battery in the battery compartment.

Battery (YTX5L-BS) (* p. 86)

- Reconnect rubber band ①.
- Attach the positive cable and replace the positive terminal cover ②.
- Attach negative cable 3.
- Mount the seat. (♥ p. 40)

Recharging the battery **→** (XC-F)

Warning

Risk of injury Battery acid and battery gases cause serious chemical burns.

- Keep batteries out of the reach of children.
- Wear suitable protective clothing and goggles.
- Avoid contact with battery acid and battery gases.
- Keep the battery away from sparks or open flames. Charge only in well-ventilated areas.
- In the event of skin contact, rinse with large amounts of water. If battery acid gets in the eyes, rinse with water for at least 15 minutes and contact a physician.

Warning

Environmental hazard Battery parts and acid are harmful to the environment.

Do not discard batteries with the household trash. Dispose of a defective battery in an environmentally compatible manner.
 Give the battery to your KTM dealer or to a recycling center that accepts used batteries.

Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

Info

Even when there is no load on the battery, it still loses power steadily.

The charge state and the type of charge are very important for the service life of the battery.

Rapid recharging with a high charging current shortens the battery's service life.

If the charging current, charging voltage and charging time are exceeded, electrolyte escapes through the safety valves. This reduces the battery capacity.

If the battery is depleted from starting the vehicle repeatedly, the battery must be charged immediately.

If the battery is left in a discharged state for an extended period, it will become over-discharged and sulfate, destroying the battery.

The battery is maintenance-free, i.e., the acid level does not have to be checked.

- Switch off all power consumers and switch off the engine.
- Remove the seat. (* p. 40)
- Disconnect the negative (minus) cable of the battery to avoid damage to the motor-cycle's electronics.
- Connect the battery charger to the battery. Switch on the battery charger.

Battery charger (58429074000)

You can also use the battery charger to test rest potential and start potential of the battery, and to test the alternator. With this device, you cannot overcharge the battery.

Info

Never remove cover 1.

Charge the battery with a maximum of 10% of the capacity specified on the battery housing ②.

- Switch off the charger after charging. Disconnect the battery. Guideline

The charge current, charge voltage and charge time must not be exceeded.		
Charge the battery regularly when the motorcycle is not in use	3 months	

Mount the seat. (* p. 40)

Changing the main fuse (XC-F)

Warning

Fire hazard The electrical system can be overloaded if the wrong fuses are used.

- Use only fuses with the prescribed amperage. Never by-pass or repair fuses.

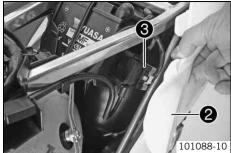

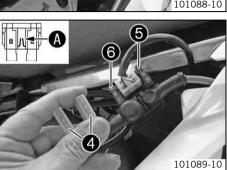

Info

The main fuse protects all power consumers in the vehicle. It is located in the starter relay housing under the filter box cover.

- Switch off all power consumers and switch off the engine.
- Remove the air filter box lid. (* p. 40)
- Remove screw 1.

- Lift rear fairing **②** slightly and pull starter relay **③** out of the bracket.

- Remove protection caps 4.
- Remove the faulty main fuse **⑤**.

Info

A defective fuse is indicated by a burned-out fuse wire **3**. A reserve fuse **3** is located in the starter relay.

Install a new main fuse.

Fuse (58011109110) (* p. 86)

Check that the electrical equipment is functioning.

Γip

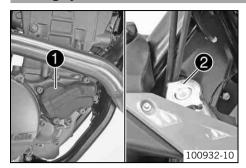

Insert the spare fuse so that it is available if needed.

- Mount the protection caps.
- Mount the starter relay onto the bracket and lay the cable.
- Position the rear fairing. Mount and tighten the screw.
 Guideline

Remaining screws, chassis M6 10 Nm (7.4 lbf ft)

Install the air filter box lid. (* p. 41)

Cooling system

Water pump 1 in the engine circulates the coolant.

The pressure resulting from the warming of the cooling system is regulated by a valve in radiator cap ②. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

120 °C (248 °F)

Cooling is effected by the air stream.

The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.

Checking the antifreeze and coolant level

Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

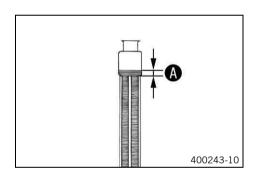

Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the
engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

Warning

Danger of poisoning Coolant is poisonous and a health hazard.

Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
- Check the antifreeze of the coolant.

- » If the antifreeze of the coolant does not meet specifications:
 - Correct the antifreeze of the coolant.
- Check the coolant level in the radiator.

Coolant level (A) above radiator fins.	10 mm (0.39 in)
---	-----------------

- » If the coolant level does not meet specifications:
 - Correct the coolant level.

Alternative 1

Coolant (* p. 93)

Alternative 2

Coolant (mixed ready to use) (p. 93)

Mount the radiator cap.

Checking the coolant level

Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

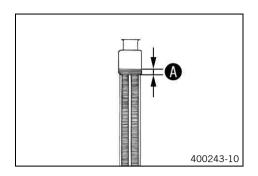

Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the
engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

Warning

Danger of poisoning Coolant is poisonous and a health hazard.

Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
- Check the coolant level in the radiator.

Coolant level **a** above radiator fins. 10 mm (0.39 in)

- » If the coolant level does not meet specifications:
 - Correct the coolant level.

Alternative 1

Coolant (* p. 93)

Alternative 2

Coolant (mixed ready to use) (* p. 93)

Mount the radiator cap.

Draining the coolant &

Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the
engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

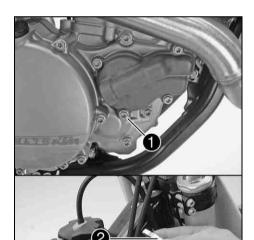

Warning

Danger of poisoning Coolant is poisonous and a health hazard.

100933-10

Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

Condition

The engine is cold.

- Position the motorcycle upright.
- Place a suitable container under the water pump cover.
- Remove screw ①. Take off radiator cap ②.
- Completely drain the coolant.
- Mount and tighten screw with a new seal ring.
 Guideline

Screw, water pump cover	M6	10 Nm (7.4 lbf ft)
-------------------------	----	--------------------

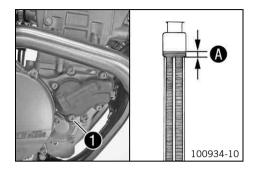

Refilling coolant &

Warning

Danger of poisoning Coolant is poisonous and a health hazard.

Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

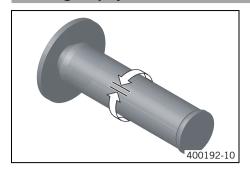

- Make sure that screw is tightened.
- Position the motorcycle upright.

Dimension 4 over the radiator fins		10 mm (0.39 in)
Coolant	1.2 l (1.3 qt.)	Coolant (* p. 93)
		Coolant (mixed ready to use) (* p. 93)

- Mount the radiator cap.
- Take a short test ride.
- Check the coolant level. (* p. 68)

Checking the play in the throttle cable

Move the handlebar to the straight-ahead position. Move the throttle grip backwards and forwards to ascertain the play in the throttle cable.

Throttle cable play 3... 5 mm (0.12... 0.2 in)

- » If the throttle cable play does not meet specifications:
 - Adjust the play in the throttle cable. 4 (* p. 71)

Danger

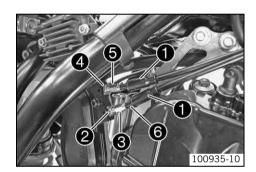

Danger of poisoning Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and let it run idle. Move the handlebar to and fro over the entire steering range.

The idle speed must not change.

- » If the idle speed changes:
 - Adjust the play in the throttle cable. 4 (* p. 71)

Adjusting the play in the throttle cable 🔌

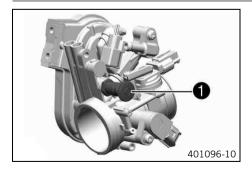

- Check the throttle cable routing. (* p. 49)
- Move the handlebar to the straight-ahead position.
- Push back sleeves ①.
- Loosen nut ②. Turn adjusting screw ③ in as far as possible.
- Loosen nut **3**. Turn adjusting screw **5** so that there is play in the throttle cable at the throttle grip.

Guideline

Throttle cable play	3 5 mm (0.12 0.2 in)
---------------------	----------------------

- Tighten nut 4.
- Tighten nut ②.
- Push sleeves on. Check the throttle grip for smooth operation.
- Install the fuel tank. (* p. 45)
- Check the play in the throttle cable. (p. 71)

Adjusting the idle speed 4

- Run the engine warm and push the idle speed adjusting screw all the way in.
- Set the desired idle speed by turning the idle speed adjusting screw.

Guideline Idle speed

2,150... 2,250 rpm

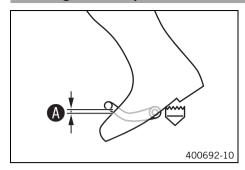

Info

Turn counterclockwise to increase the idle speed.

Turn clockwise to decrease the idle speed.

Checking the basic position of the shift lever

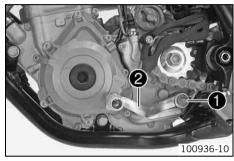

Sit on the vehicle in the riding position and determine the distance • between the upper edge of your boot and the shift lever.

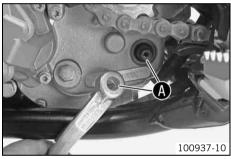

Distance between shift lever and upper	10 20 mm (0.39 0.79 in)
edge of boot	

- » If the distance does not meet specifications:
 - Adjust the basic position of the shift lever. ⁴ (♥ p. 72)

Adjusting the basic position of the shift lever 🔌

Remove screw 1 and take off shift lever 2.

- Mount the shift lever on the shift shaft in the required position and engage the gearing.

Info

The range of adjustment is limited.

The shift lever must not come into contact with any other vehicle components during the shift procedure.

Mount and tighten screw.

Guideline

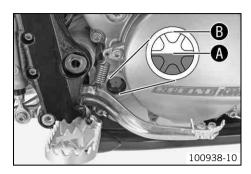

Screw, shift lever	M6	14 Nm	Loctite® 243™
		(10.3 lbf ft)	ì

Checking the engine oil level

Info

The engine oil level can be checked when the engine is cold or warm.

- Stand the motorcycle upright on a horizontal surface.

Condition

The engine is cold.

Check the engine oil level.

The engine oil level is up to the middle **4** of the level viewer.

- » If the engine oil is not up to the middle of the level viewer:
 - Add engine oil. (▼ p. 75)

Condition

The engine is at operating temperature.

Check the engine oil level.

Info

After switching off the engine, wait one minute before checking the level.

The engine oil is at a level between the middle $\ensuremath{\mathfrak{G}}$ and upper edge $\ensuremath{\mathfrak{G}}$ of the level viewer.

- » If the engine oil is not up to the middle **(a)** of the level viewer:
 - Add engine oil. (* p. 75)

Changing the engine oil and oil filter, cleaning the oil screen 🔌

Warning

Danger of scalding Engine oil and gear oil get very hot when the motorcycle is ridden.

- Wear appropriate protective clothing and safety gloves. In case of burns, rinse immediately with lukewarm water.

Warning

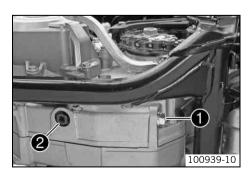

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

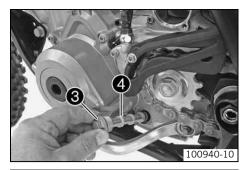

Info

Drain the engine oil only when the engine is warm.

(SX-F MUSQUIN REPLICA)

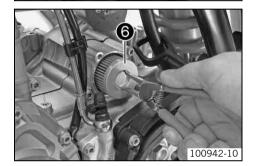

- Remove the engine guard. (* p. 51)
- Park the motorcycle on a level surface.
- Place a suitable container under the engine.
- Remove oil drain plug with the magnet and seal ring.
- Remove screw plug ② with the short oil screen.

- Remove screw plug 3 with the long oil screen 4.

- Remove screws **6**. Remove the oil filter cover with the O-ring.

- Pull oil filter **6** out of the oil filter housing.

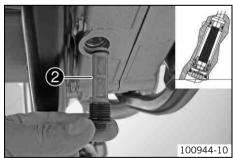

Circlip pliers reverse (51012011000)

- Completely drain the engine oil.
- Thoroughly clean the parts and sealing surfaces.

Mount and tighten the oil drain plug • with the magnet and a new seal ring.
 Guideline

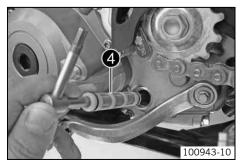

Oil drain plug with magnet	M12x1.5	20 Nm
		(14.8 lbf ft)

 Insert the short oil screen 2 into the screw plug, mount it with the O-ring and tighten.

Guideline

Plug for oil screen, short	M16x1.5	10 Nm	Lubricated with
		(7.4 lbf ft)	engine oil

Place the long oil screen 4 with the O-rings onto a pin wrench.

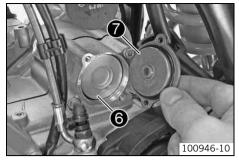

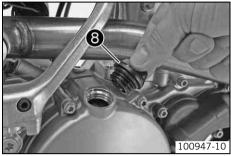

Info

The larger inside diameter of the oil screen must face the engine case.

- Push the pin wrench through the opening into the drill hole of the opposite engine case wall and push the oil screen as far as possible into the engine case.
- Mount and tighten the screw plug with the O-ring.
 Guideline

Plug for oil screen, long	M20x1.5	15 Nm
		(11.1 lbf ft)

- Lay the motorcycle on its side and fill the oil filter housing to about $\frac{1}{3}$ full with engine oil.
- Fill oil filter 6 with engine oil and place it in the oil filter housing.
- Oil the O-ring of the oil filter cover and mount it with the oil filter cover ①.
- Mount and tighten the screws.

Guideline

Screw, oil filter cover	M5	6 Nm (4.4 lbf ft)
-------------------------	----	-------------------

- Stand the motorcycle upright.
- Remove filler plug 3 with the O-ring on the clutch cover and add engine oil to the upper edge of the level viewer.

Engine oil	1.20 l (1.27 qt.)	Engine oil (SAE 10W/50) (* p. 93)	
		Alternative engine oil for harsh oper- ating conditions and increased per- formance	Engine oil (SAE 10W/60) (00062010035) (** p. 93)

Info

Too little engine oil or poor-quality engine oil results in premature wear to the engine.

Install and tighten the oil filler plug with O-ring.

Danger

Danger of poisoning Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and check that it is oil-tight.

(SX-F MUSQUIN REPLICA)

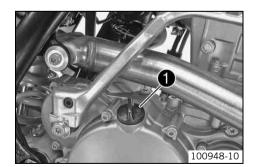

- Install the engine guard. (* p. 51)
- Check the engine oil level. (* p. 73)

Adding engine oil

Info

Too little engine oil or poor-quality engine oil results in premature wear to the engine.

- Remove the oil filler plug with the O-ring from the clutch cover.
- Add the same engine oil that was used when the motor was changed.

Engine oil (SAE 10W/50) (p. 93)

Alternative 1

Engine oil (SAE 10W/60) (00062010035) (p. 93)

Info

For optimal performance of the engine oil, do not mix different types of engine oil.

If appropriate, change the engine oil.

Install and tighten the oil filler plug with O-ring.

Danger

Danger of poisoning Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.

- Start the engine and check that it is oil-tight.

Cleaning the motorcycle

Note

Material damage Damage and destruction of components by high-pressure cleaning equipment.

Never clean the vehicle with high-pressure cleaning equipment or a strong water-jet. The excessive pressure can penetrate electrical components, socket connects, throttle cables, and bearings, etc., and can damage or destroy these parts.

Warning

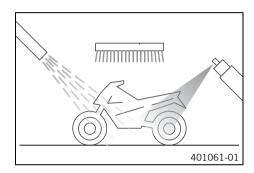

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

Info

If you clean the motorcycle regularly, its value and appearance will be maintained over a long period. Avoid direct sunshine on the motorcycle during cleaning.

- Seal the exhaust system to keep water out.
- First remove coarse dirt particles with a gentle spray of water.
- Spray very dirty areas with a normal motorcycle cleaner and then clean with a paintbrush.

Motorcycle cleaner (* p. 95)

Info

Use warm water containing normal motorcycle cleaner and a soft sponge.

After rinsing the motorcycle with a gentle spray of water, allow it to dry thoroughly.

Warning

Danger of accidents Reduced braking efficiency due to wet or dirty brakes.

- Clean or dry dirty or wet brakes by riding and braking gently.
- After cleaning, ride a short distance until the engine reaches operating temperature.

Info

The heat produced causes water at inaccessible locations in the engine and the brakes to evaporate.

- Push back the protection caps of the handlebar controls to allow any water that has penetrated to evaporate.
- After the motorcycle has cooled off, lubricate all moving parts and bearings.
- Clean the chain. (* p. 46)
- Treat bare metal parts (except for brake discs and exhaust system) with anti-corrosion materials.

Cleaning and preserving materials for metal, rubber and plastic (** p. 95)

 Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

Paint cleaner and polish for high-gloss and matte finishes, bare metal and plastic surfaces (p. 96)

STORAGE 78

Storage

Warning

Danger of poisoning Fuel is poisonous and a health hazard.

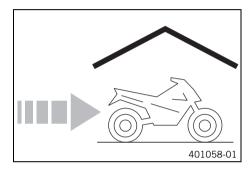

Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.

Info

If you want to garage the motorcycle for a longer period, take the following steps.

Before storing the motorcycle, check all parts for function and wear. If service, repairs or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

- Clean the motorcycle. (* p. 77)
- - Check the antifreeze and coolant level. (* p. 68)
- Drain the fuel from the tank into a suitable container.
- Check the tire air pressure. (* p. 63)

(XC-F)

- Remove the battery. ⁴ (▼ p. 65)
- Recharge the battery. ♣ (p. 65)
 Guideline

Storage temperature of battery without direct sunlight 0... 35 °C (32... 95 °F)

Store the vehicle in a dry location that is not subject to large fluctuations in temperature.

Info

KTM recommends raising the motorcycle.

- Raise the motorcycle with the lift stand. (♥ p. 32)
- Cover the vehicle with a tarp or a cover that is permeable to air.

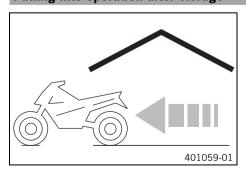

Info

Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion.

Avoid running the engine for a short time only. Since the engine cannot warm up properly, the water vapor produced during combustion condenses and causes valves and exhaust system to rust.

Putting into operation after storage

Remove the motorcycle from the lift stand. (* p. 32)

(XC-F)

- Install the battery. ⁴ (♥ p. 65)
- Refuel. (* p. 21)
- Perform checks and maintenance steps before putting into operation. (* p. 19)
- Take a test ride.

	Exhaust system leaky, deformed or	_	Check exhaust system for damage.
	too little glass fiber yarn filling in main silencer	-	Change the glass fiber yarn filling of the main silencer. ◀ (p. 43)
	Valve clearance too little	_	Adjust the valve clearance.
Engine dies during the trip	Lack of fuel	_	Refuel. (* p. 21)
Engine overheats	Too little coolant in cooling system	_	Check the cooling system for leakage.
		_	Check the coolant level. (* p. 68)
	Too little air stream	_	Switch off the engine when standing.
	Radiator fins very dirty	_	Clean the radiator fins.
	Foam formation in cooling system	_	Drain the coolant. 🐴 (🕶 p. 69)
		_	Refill the coolant. 🐴 (🕶 p. 70)
	Bent radiator hose	-	Change the radiator hose.
FI warning lamp (MIL) lights up/flashes	Defect in fuel injection system	-	Stop the motorcycle and identify the faulty part using the blink code.
		-	Check the cabling for damage and the electrical plug-in connections for corrosion and damage.
		_	Read out the fault memory using the KTM diagnostics tool.
High oil consumption	Engine vent hose bent	<u> </u>	Route the vent hose without bends or change it if necessary.
	Engine oil level too high	-	Check the engine oil level. (* p. 73)
	Engine oil too thin (low viscosity)	-	Change the engine oil and oil filter, clean the oil screen. ◀ (p. 73)

Faults	Possible cause	Action
High oil consumption	Piston and cylinder worn	 Piston/cylinder - determine the mounting clear- ance.
Battery discharged (XC-F)	Battery is not charging	Check the charging voltage.Check the stator winding of the alternator.
	Unwanted power consumer	 Check the open-circuit current. ⁴

SUBSTANCES 93

Brake fluid DOT 4 / DOT 5.1

According to

- DOT

Guideline

Use only brake fluid that complies with the specified standard (see specifications on the container) and that possesses the corresponding properties. KTM recommends Castrol and Motorex® products.

Supplier

Castrol

RESPONSE BRAKE FLUID SUPER DOT 4

Motorex®

- Brake Fluid DOT 5.1

Coolant

Guideline

Use only suitable coolant (also in countries with high temperatures). Use of low-quality antifreeze can lead to corrosion and foaming. KTM recommends Motorex® products.

Mixture ratio

Antifreeze protection: -2545 °C (-13	50 % corrosion inhibitor/antifreeze
−49 °F)	50 % distilled water

Coolant (mixed ready to use)

Antifreeze	-40 °C (-40 °F)

Supplier

Motorex®

Anti Freeze

Engine oil (SAE 10W/60) (00062010035)

According to

- JASO T903 MA (* p. 97)
- SAE (* p. 97) (SAE 10W/60)
- KTM LC4 2007+

Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties. KTM recommends Motorex® products.

Synthetic engine oil

Supplier

Motorex®

Motorex[®] KTM Cross Power 4T

Engine oil (SAE 10W/50)

According to

- JASO T903 MA (♥ p. 97)
- SAE (♥ p. 97) (SAE 10W/50)

Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties. KTM recommends Motorex® products.

Synthetic engine oil

Supplier

Motorex®

Cross Power 4T

SUBSTANCES 94

Fork oil (SAE 5)

According to

- SAE (***** p. 97) (SAE 5)

Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties. KTM recommends Motorex® products.

Supplier

Motorex®

- Racing Fork Oil

Shock absorber oil (SAE 2,5) (50180342S1)

According to

- SAE (***** p. 97) (SAE 2,5)

Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties.

Super unleaded (ROZ 95 / RON 95 / PON 91)

According to

- DIN EN 228 (ROZ 95 / RON 95 / PON 91)

Air filter cleaner

Guideline

KTM recommends Motorex® products.

Supplier

Motorex[®]

- Twin Air Dirt Bio Remover

Chain cleaner

Guideline

KTM recommends Motorex® products.

Supplie

Motorex®

Chain Clean

Cleaning and preserving materials for metal, rubber and plastic

Guideline

KTM recommends Motorex[®] products.

Supplier

Motorex®

- Protect & Shine

High viscosity grease

Guideline

KTM recommends SKF® products.

Supplier

SKF®

- LGHB 2

Long-life grease

Guideline

KTM recommends Motorex® products.

Supplier

Motorex[®]

- Bike Grease 2000

Motorcycle cleaner

Guideline

KTM recommends Motorex® products.

Supplier

Motorex®

- Moto Clean 900

Off-road chain spray

Guideline

KTM recommends Motorex® products.

Supplier

Motorex[®]

- Chainlube Offroad

Oil for foam air filter

Guideline

KTM recommends Motorex® products.

Supplier

Motorex®

- Twin Air Liquid Bio Power

Paint cleaner and polish for high-gloss and matte finishes, bare metal and plastic surfaces

Cuideline

KTM recommends Motorex® products.

Supplier

Motorex[®]

- Clean & Polish

Universal oil spray

Guideline

KTM recommends Motorex® products.

Supplier

Motorex®

- Joker 440 Synthetic

STANDARDS 97

JASO T903 MA

Different technical development directions required a new specification for 4-stroke motorcycles – the JASO T903 MA Standard. Earlier, engine oils from the automobile industry were used for 4-stroke motorcycles because there was no separate motorcycle specification. Whereas long service intervals are demanded for automobile engines, high performance at high engine speeds are in the foreground for motorcycle engines. With most motorcycles, the gearbox and the clutch are lubricated with the same oil as the engine. The JASO MA Standard meets these special requirements.

SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.

INDEX 98

A	Compression damping, low-speed
Accessories	shock absorber, adjusting
Air filter	Coolant
cleaning	draining
installing	refilling 70
removing	Coolant level
Air filter box	checking
cleaning 42	Cooling system
Air filter box lid	D
installing	Difficult riding conditions
removing	dry sand
Antifreeze	high temperatures
checking	low speeds
В	low temperatures
Basic chassis setting	muddy surfaces
checking with rider's weight	wet sand
Battery	wet surfaces
installing	E
recharging	Electric starter button
removing	Engine
Blink code	running in
Brake discs	Engine guard
checking	installing
Brake fluid	removing
